2 The Mountain-View Data Fund Rating calculates a comparative ranking for funds using yield, volatility and trend data. For more information visit [MVD Funds Rating](#)

### Investment strategy

To achieve the aim, the fund will attempt to replicate the index, before fees and expenses, by buying a portfolio of securities that may comprise the constituents of the index or other unrelated investments as determined by DWS entities. The fund may employ techniques and instruments in order to manage risk, reduce costs and improve results. These techniques and instruments may include the use of derivatives. The fund may also engage in secured lending of its investments to certain eligible third parties to generate additional income to offset the costs of the fund.

### Investment goal

The aim is for your investment to reflect the performance of the IBOXX € SOVEREIGNS EUROZONE® Index (index). The index reflects the performance of tradable debt (bonds) denominated in Euro or pre-Euro currencies issued by Eurozone-governments. The composition of the index is rebalanced according to a pre-set methodology. For bonds to be included in the index they must, on the relevant rebalancing date, have a remaining time to maturity of at least one year. The bonds must have a fixed rate of interest and must be part of an issue of debt which has at least €1 billion in principal outstanding. The index is calculated on a total return basis, which means that amounts equivalent to interest payments on the bonds are reinvested in the index. The index is administered by IHS Markit Benchmark Administration Limited and reviewed and rebalanced monthly.
