

KEY INVESTOR INFORMATION

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

Candriam Equities L Australia, a sub-fund of the SICAV Candriam Equities L

Class N - Capitalisation shares: LU0256780874

Competent authority: CSSF (Commission de Surveillance du Secteur Financier)

Management company: Candriam

OBJECTIVES AND INVESTMENT POLICY

Principal assets traded:

Shares of companies whose registered offices and/or principal activities are in Australia.

Investment strategy:

The fund seeks to achieve capital growth by investing in the principal assets traded and to outperform the benchmark index.

Within the limits of the fund's objective and investment policy, the management team makes discretionary investment choices in the portfolio based on its analyses of the characteristics and growth prospects of the assets traded.

The Fund does not have a sustainable investment objective and does not specifically promote environmental and/or social characteristics.

The fund may use derivative products both for investment and hedging purposes (hedging against unfavourable future financial events).

Benchmark: All Ordinaries (Gross Return)

The fund is actively managed and the investment process implies referring to a benchmark index.

Definition of the index:

The index measures the performance of the 500 principal securities in the Australian equities market.

Use of the index:

- as an investment universe. In general, most of the financial instruments in the sub-fund are part of the index. However, investments outside this index are authorised,

- in determining risk levels/risk parameters,

- for the purpose of performance comparisons.

Since the fund is actively managed, it does not have the goal of investing in all components of the index, nor that of investing in the same proportions as the components of this index. In normal market conditions, the expected tracking error of the fund will be moderate to significant, i.e. between 2% and 6%. This measurement is an estimate of the performance gap between the fund and its benchmark index. The greater the tracking error, the greater the deviations from the benchmark index. The actual tracking error depends in particular on market conditions (volatility and correlations between financial instruments) and may therefore deviate from the tracking error expected.

Redemption of shares: On request, every day, in Luxembourg.

Allocation of income: Reinvestment.

Recommendation: This fund may not be suitable for investors who plan to withdraw their capital within 6 years.

RISK AND REWARD PROFILE

• The risk level shown reflects the fund's historical volatility, completed where applicable by that of its reference framework. The volatility indicates the extent to which the value of the fund may fluctuate upwards or downwards.

• The historical data may not be a reliable indication for the future.

• The indicated category may vary over time.

• The lowest category does not mean "risk-free".

• There is no guarantee or mechanism to protect the capital.

The investor needs to be aware of the following significant risks which are not necessarily adequately taken into account by the indicator:

• **Risk related to financial derivative instruments:** their use implies risk associated with the underlying assets and can accentuate downward movements via the resulting leverage effect. Hedging strategies using derivatives may not be perfect. Some derivatives may be difficult to value under exceptional markets circumstances.

• **Sustainability risk:** refers to any event or situation in the environmental, social or governance domain that could affect the performance and/or the reputation of the issuers in the portfolio. The sustainability risk may be specific to the issuer, depending on its activities and practices, but it may also be due to external factors.

• **Concentration risk:** given the significant concentration of assets in one market segment and a limited number of issuers, the risks potentially associated with a deterioration of the fundamentals and/or the liquidity of this segment would have a greater impact on the assets compared to a more diversified portfolio of assets.
