Risk and reward profile

The calculation of the risk and reward profile is based on historical data that cannot be used as a reliable indicator for the future risk profile. This risk indicator is subject to changes; the classification of the fund may change over time and cannot be guaranteed. Even a fund that is classified in the lowest category (category 1) does not represent a completely risk-free investment. The fund is classified in category 4 because its share price fluctuates and the likelihood of both losses and gains may therefore be relatively high. The following risks could be of particular significance for the fund: The

fund invests in equities. Equities are subject to strong price fluctuations and thus also to the risk of price decreases. The fund invests in convertible and warrant-linked bonds. Convertible and warrant-linked bonds embody the right to convert the bond into equities or to acquire equities. The performance of the value of the convertible and warrant-linked bonds is therefore dependent on the price performance of the equity as the underlying. The risks of the performance of the underlying equities can therefore impact on the performance of the convertible and warrant-linked bonds. The fund invests in bonds, the value of which depends on whether the issuer is able to afford its payments. The deterioration of credit quality (ability and willingness to repay) may have an adverse affect on the value of the bond.

A more detailed description of risks and other general information can be found in the risk section(s) of the prospectus.
