Equity and bond markets

Equity markets in the fiscal six-month period through June 30, 2010

Consolidation in the international equity markets

In the fiscal six-month period from the start of January 2010, through the end of June 2010, the equity markets were impacted by the high budget deficits of, in particular, southern European countries. As a result, price-stimulating factors such as the overall robust performance of the global economy and the strong growth in corporate profits were pushed into the background and led at best to a temporary – although quite significant – price increase. However, in countries with weak financial stability, ongoing concerns about growth continued to have a dampening effect on prices. Over the course of the reporting period, therefore, volatility on the exchanges increased tangibly. Even the package of measures put in place by the EU, IMF and the ECB to stabilize highly indebted Euro states only effected a brief recovery in international stock markets. Overall, the MSCI World index was down 9.8% in the six months through the end of June 2010 on a U.S. dollar basis; in euro an increase of 5.9% was posted due to the weakness of that currency. At sector level, bank stocks with a larger position in southern Europe in particular displayed marked price drops. Furthermore, the anticipated financial market regulation also weakened the performance of this sector. Equities in the retail and food product sectors, which are less sensitive to economic cycles, performed comparatively well. Furthermore, cyclicals from the industrial and technology segment performed well due to a continuing favorable global economic climate. At first, **U.S. equities** were able to benefit from a wealth of positive economic and corporate data. As time progressed, however, concerns regarding the strong increase in state indebtedness

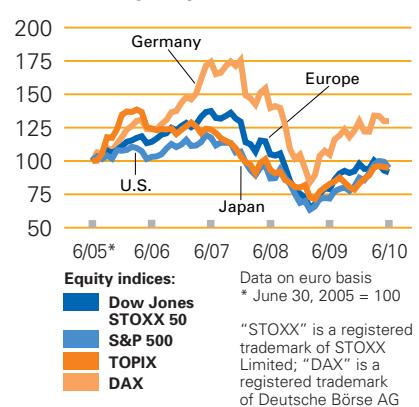

in Europe impacted on their performance, amid fears of negative fallout for the U.S. economy. The S&P 500 index fell 7.6% in U.S. dollar terms (+8.4% in euro) in the six-month reporting period. In **Europe**, the stock exchanges in Germany and Switzerland were among the best performers, thanks to predominantly good corporate results and continued growth in exports (in Germany this was appreciably aided by the weakness of the euro), positive outcomes from the government stimulus packages and the comparatively solid state budgets. The equity markets in countries such as Greece, Ireland and Spain remained at markedly low levels due to continued doubts about their financial stability and the associated concerns regarding growth. This was a major contributing factor to the 6.5% drop on the Dow Jones STOXX 50 index in euro terms.

Japanese stocks were not able to continue their price increase despite indications of continued economic recovery. The export-oriented Japanese industry suffered the negative impact of the considerable appreciation of the yen against the euro and the U.S. dollar among other factors. As measured by the TOPIX index, Japanese equities fell by 6.4% in the national currency during the six months through the end of June 2010 (+14.2% in euro terms).

Good fundamental data in the emerging markets

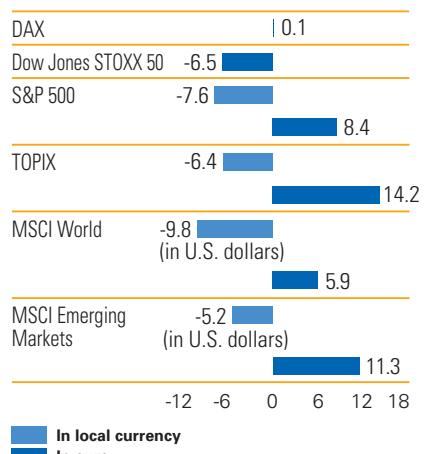

The global economic recovery is based increasingly on the favorable economic environment in the **emerging markets**. Both export and domestic demand recorded significant growth rates and brought price increases to the local equity markets. The MSCI Emerging Markets index rose by 11.3% in euro terms when viewed over the six month period.

Gold remains in demand

Against the backdrop of fears of increased inflation rates following the marked rise in government indebtedness in many countries over the course of the six month period, gold continued its upwards trend and exceeded the 1,250 U.S. dollars per troy ounce mark toward the end of the reporting period. The insolvency risk of financially weak countries led to doubts regarding a sustained stabilization of the global economy and to strong fluctuations in commodity prices. At the end of June 2010, the price of crude oil was approximately 75 U.S. dollars per barrel of WTI.

Bond markets in the fiscal six-month period through June 30, 2010

Economic recovery, but increasing risks due to government debt

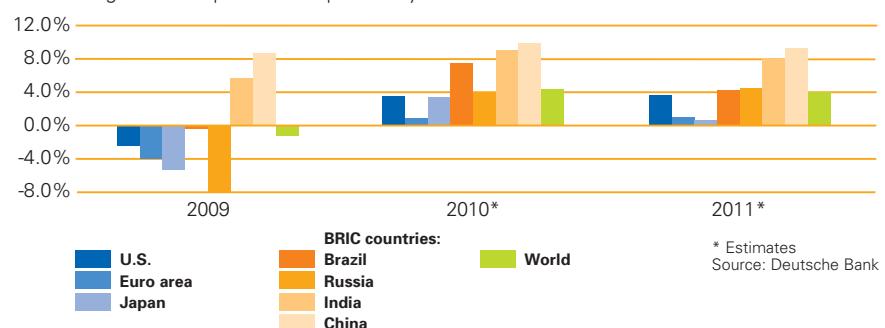

Following the deepest recession since the Great Depression, signs of a dynamic recovery in the global economy increased at first in the six-month period through the end of June 2010, buoyed particularly by the renewed increase in corporate investment and by international trade. In particular, economic growth in the emerging markets proved to be a robust support for the global economy. During the period that followed, the crisis in the financial markets also eased somewhat after its escalation in the fall of 2008. This improvement however was pitted against the tangibly increased level of government indebtedness in many industrial countries, which then proceeded to become the dominant topic in the capital markets. At times, the deficits of the industrial countries rocketed to their highest levels since the Second World War as a result of the stark rise in government spending – necessary to try to stabilize their economies – and the rapid decline in tax revenues. Against this backdrop, the initial optimism of market participants gave way to increasing skepticism with respect to the sustainability of the economic recovery.

Uneven bond markets

The international bond markets displayed an uneven performance marked by relatively high volatility. In this context, they were very much focused on ongoing developments in the Greek debt crisis. Even the package of measures put in place by the EU, IMF and the ECB to stabilize highly indebted Euro states only brought about a brief recovery. Government bonds from the core European

Economic growth in the U.S., the euro area, Japan, the BRIC countries (Brazil, Russia, India, China) and the world

Economic growth compared to the previous year

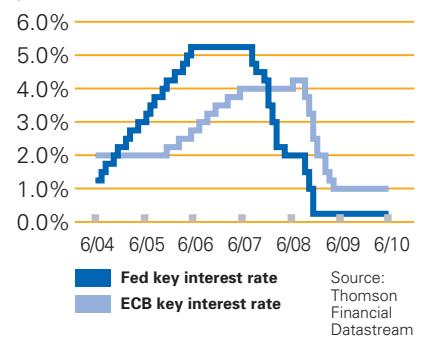

markets and the U.S. profited from increasing risk aversion in the capital markets. These issues recorded price gains with diminishing returns (at a low level). For example, ten-year German government bonds dropped appreciably from 3.4% to 2.6% p.a., while U.S. government bonds fell from 3.8% to 2.9% p.a. In Switzerland and Japan, the yields of ten-year bonds continued to decrease to a very low level internationally and stood most recently at 1.5% and 1.1% p.a. respectively. Southern European interest-bearing instruments, on the other hand, particularly issues from Greece, came under price pressure with at times tangibly increasing yields. Consequently, in the ten-year maturity segment, the returns from Greek government bonds increased significantly from 5.8% to 10.4% p.a. In Spain and Portugal, the yield increases were more moderate however; here the returns for ten-year government bonds were 4.6% and 5.7% p.a. respectively at the end of June. The higher capital market interest rates increased consolidation pressure in the EU peripheral countries.

Significantly weakened euro

The excess indebtedness of countries was fought out primarily in the currency

Development of key interest rates in the U.S. and in the euro area

p. a.

markets. The euro came under considerable pressure, while the U.S. dollar benefited more from the relative weakness of the European common currency than it did from its own strength (+16.9%). The Japanese yen (+22.9%) and the Swiss franc (+12.3%) went up sharply against the euro. Many emerging market currencies also appreciated noticeably. This was due to, among other factors, the surpluses in foreign trade, but more so to the risk appetite of international investors, who, faced with the extremely low interest rates and moderate growth expectations in the industrial countries, sought out attractive returns in the emerging-market countries.

General information

The investment funds described in this report are sub-funds (hereinafter also referred to as investment funds) of a SICAV (Société d'Investissement à Capital Variable) incorporated under Luxembourg law.

Performance

The investment return, or performance, of a mutual fund investment is measured by the change in value of the fund's shares. The net asset values per share (= redemption prices) with the addition of intervening distributions, which are, for example, reinvested free of charge within the scope of investment accounts at DWS, are used as the basis for calculating the value. Performance is calculated according to the BVI method (used by the BVI, the main German investment fund industry association), i.e., excluding the initial sales charge. Past performance is not a guide to future results. The 51 sub-funds currently offered are available in up to nine share classes

(multi-share classes). This may give rise to differences in the performance of the respective share classes. The corresponding benchmarks – if available – are also presented in the report. All financial data in this publication is **as of June 30, 2010**, with the exception of mergers and sub-fund liquidations during the fiscal year. The deadline for completing the text portions of the report was July 31, 2010.

For the realized gains or losses reported in the financial statements or in the statement of changes in net assets of the respective sub-funds, positive and negative results within the same product category are netted in each case; across product categories, negative or positive result balances on a gross basis are reported as the realized loss or gain.

Sales prospectuses

Fund shares are purchased on the basis of the current simplified and full sales prospectuses and the by-laws

of the SICAV, in combination with the latest audited annual report and any semiannual report that is more recent than the latest annual report.

Publication of the net asset value per share and of the issue and redemption prices

The respective net asset values per share, the current issue and redemption prices including the initial sales charge and the redemption fee, as well as all other information for shareholders may be requested at any time at the registered office of the Management Company and from the paying agents. In addition, depending on customary market practice, the net asset values per share and/or the issue and redemption prices are also published in every country of distribution through appropriate media (such as the Internet, electronic information systems, newspapers, etc.).

Obligations for cross-border distribution

Included in the financial statements of this SICAV (Société d'Investissement à Capital Variable) is a report by the Réviseur d'Entreprises (the independent auditor's opinion). This report refers exclusively to the German version of the annual financial statements.

In the case of cross-border distribution, one of the obligations of the SICAV is to also publish annual reports in at least one of the national languages of the relevant country of distribution or in another language authorized by the responsible authorities in the relevant country of distribution, if applicable, also in summary form on a sub-fund basis. The tax information contained in the annual reports for investors who are subject, without limitation, to taxation in the Federal Republic of Germany and specific information for investors in a different country of distribution have been omitted in the national or specific language versions. National or language versions must also be published for the semiannual reports to be produced for the first half of the fiscal year.

In the case of discrepancies between the German version of the report and any translation thereof, the German version shall be binding.

Following a resolution to that effect adopted by the management authorized by the Board of Directors of DWS Investment S.A. and the approval of the Luxembourg supervisory authority CSSF, the fund **DWS Dollarrenta** was **incorporated into** the sub-fund **DWS Invest US-Gov Bonds (LC)** effective April 30, 2010. The issue of new fund shares was discontinued effective April 1, 2010. Investors could return fund shares until April 23, 2010.

Following a resolution to that effect adopted by the management authorized by the Board of Directors of DWS Investment S.A. and the approval of the Luxembourg supervisory authority CSSF, the fund **DWS Euro-Corp Bonds** was **incorporated into** the sub-fund **DWS Invest Euro Corporate Bonds (LD)** effective April 30, 2010. The issue of new fund shares was discontinued effective April 1, 2010. Investors could return fund shares until April 23, 2010.

Following a resolution to that effect adopted by the management authorized by the Board of Directors of DWS Investment S.A. and the approval of the Luxembourg supervisory authority CSSF, the fund **DWS Euro-Corp Bonds (Short)** was **incorporated into** the sub-fund **DWS Invest Euro Bonds (Short) (LD)** effective April 16, 2010. The issue of new fund shares was discontinued effective March 19, 2010. Investors could return fund shares until April 9, 2010.

The **LS** share class of the sub-fund **DWS Invest Euro Corporate Bonds** was **closed** effective March 12, 2010, by resolution of the management authorized by the Board of Directors.

The **FD** share class of the sub-fund **DWS Invest Emerging Yield Plus** was **closed** effective April 28, 2010, by resolution of the management authorized by the Board of Directors.

The valuation of the products contained in the portfolio of the respective sub-fund as of the balance sheet date was performed by the Management Company in good faith in accordance with generally accepted valuation principles. The valuation represents the application of the greatest possible diligence and prudence and was based on the most recently available market or exchange prices.

The respective sub-fund's assets are partially invested in products for which there was no liquid market as of the balance sheet date due to the financial market crisis.

The valuation was therefore carried out with estimated current values based on indicative broker quotations or valuation models, which does not necessarily imply that market transactions have taken place.

Given the financial market crisis and the associated illiquidity of the market for these products, it can generally not be excluded that such securities transactions could have taken place at higher or lower values.

2010

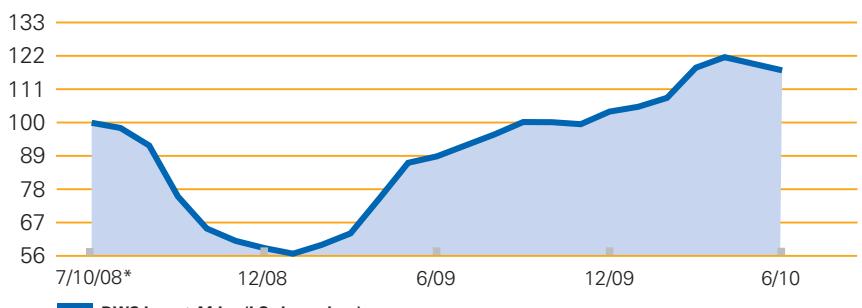

Semianual report

DWS Invest Africa

The pan-African sub-fund

The equity sub-fund DWS Invest Africa invested on the African continent and focused on companies with strong earnings, good market positioning and a high equity ratio, whereby the abundance of natural resources, infrastructure spending and consumer growth played an especially big part within the individual securities selection. In the fiscal six-month period from the start of January through the end of June 2010, the price gains made in the African equity markets once again exceeded those of the established exchanges, in light of their promising growth prospects. Against this backdrop, the sub-fund recorded an appreciation of 13.1% per share (LC share class, BVI method), which put it behind its benchmark however, the S&P Africa 40 which gained 18.2% (both percentages in euro terms). The underperformance resulted from the overweighting of Nigerian bank stocks, which experienced a correction after earlier price increases, and a significant underweighting of the gold sector; gold mining companies were strongly represented in the benchmark and were underweighted in the sub-fund for diversification reasons. At country level, Nigeria remained overweighted due to the expectation of good corporate operating figures. These included bank stocks such as Access Bank, Diamond Bank and Skye Bank, which recorded high increases in lending and additionally profited from the planned establishment by the central bank of a "bad bank" for the purposes of assuming illiquid securities. In West Africa, holdings in iron ore producers were increased. Given the increased investment by international mining companies (Rio Tinto, Vale do

Rio Doce) in the region, the African companies held in the portfolio, Bellzone Mining, Sundance Resources and African Minerals, benefited from the expectation of greater infrastructural investment, e.g. the planned construc-

tion of railway links. Furthermore, holdings in the consumer goods segment as a whole, including in Nigerian Breweries and Juhayna Food Industries (milk producers), were increased due to greater consumer demand.

DWS Invest Alpha Conservative

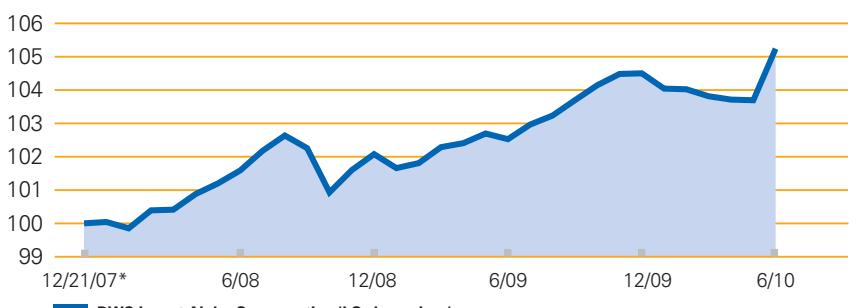

(from July 1, 2010: DWS Invest Income Strategy Conservative)
The sub-fund with an absolute return target (no guarantee) and a dynamic investment strategy based on short-term euro securities

DWS Invest Alpha Conservative seeks to achieve a positive return in euro. Fixed- and floating-rate bonds in euro with a short term to maturity served as the core investment. The management also employed various alpha strategies in order to be able to profit from the relative fluctuations in prices and rates between currencies and bond markets. Indices/currencies and instruments regarded positively were bought (long positions), and/or issues regarded negatively were sold (short positions) at the same time. In the process, derivatives were primarily implemented in the form of long/short pairs, and a market-neutral portfolio structure was pursued in order to achieve yields independent of the market.

The sub-fund operated in a climate characterized by a slight economic recovery, by increasing risks due to significant levels of government debt in the industrial countries and by severe fluctuations in the currency markets. Against this backdrop, it achieved an appreciation of 0.7% per share within the six-month period through the end of June 2010 (LC share class, in euro; BVI method).

Within the framework of its interest strategy and by using financial deriva-

As of: June 30, 2010

tives, the management used trend-following and interest rate difference strategies in the bond markets in Germany, the United Kingdom and the U.S. This contributed significantly to the positive investment result.

On the currency side, DWS Invest Alpha Conservative used derivatives

in its focus on the currencies of the G10 states. The strength of the yen and the weakness of the euro however were more pronounced than expected, meaning that this approach did not contribute significantly to the positive performance of the sub-fund.

DWS Invest Alpha Opportunities

**Implementation of alpha strategies to exploit price fluctuations
in the global currency, equity and bond markets**

The objective of the sub-fund is to achieve the greatest possible increase in value in euro. On the basis of a portfolio that approximates the money market, the management employed various alpha strategies while using derivative financial instruments in order to profit from the relative fluctuations in prices and rates in the equity, bond and currency markets. Indices/currencies and instruments regarded positively were bought (long positions), and/or issues regarded negatively were sold (short positions) at the same time. In the process, derivatives were primarily implemented in the form of long/short pairs, and a market-neutral portfolio structure was sought.

DWS Invest Alpha Opportunities operated in a climate characterized by a slight economic recovery, by increasing risks due to significantly higher government debt in the industrial countries and by severe fluctuations in the currency markets. Against this backdrop, it registered a decline of 0.8% per share (LC share class, in euro; BVI method) in the six months through the end of June 2010.

Within the framework of its currency holdings and with its long positions in the U.S. dollar and in the commodities-driven New Zealand and Australian dollars, the sub-fund profited from their appreciation against the euro. However, the short position in the

British pound, which despite continuing, deteriorating economic data recorded a positive performance in the second quarter on the basis of hopes regarding the new government, had a dampening effect.

In equities, the sub-fund was positioned long in the euro area and short in the U.S. However, the U.S. exchanges unexpectedly outperformed those in the euro zone, even though the economy recovered there, too. The debt crisis in

the southern European countries cast a grey cloud over the general mood, making investors more risk-averse.

On the bond side, the long positions in five and ten-year U.S. government bonds made a particularly positive contribution to returns overall. Their performance was offset however by the short positions in ten-year euro and British government bonds, which surprised by turning in an improved performance.

DWS Invest Alpha Strategy

**Implementation of alpha strategies to exploit price fluctuations
in the global currency, equity and bond markets**

The objective of the sub-fund is to achieve the greatest possible increase in value in euro. The core investment was a portfolio that approximates the money market using derivative financial instruments. The management also employed various alpha strategies in order to be able to profit from the relative fluctuations in prices and rates between currencies and bond markets.

Indices/currencies and instruments regarded positively were bought (long positions), and/or issues regarded negatively were sold (short positions) at the same time. In the process, derivatives were primarily implemented in the form of long/short pairs, and a market-neutral portfolio structure was sought.

DWS Invest Alpha Strategy operated in a climate characterized by a slight economic recovery, by increasing risks due to significantly higher government debt in the industrial countries and by severe fluctuations in the currency markets. Against this backdrop, it achieved an appreciation of 1.1% per share within the six-month period through the end of June 2010 (LC share class, in euro; BVI method).

Within the framework of its currency holdings and with its long positions in the U.S. dollar and in the commodities-driven New Zealand and Australian dollars, the sub-fund profited from

DWS Invest Asian Small/Mid Cap

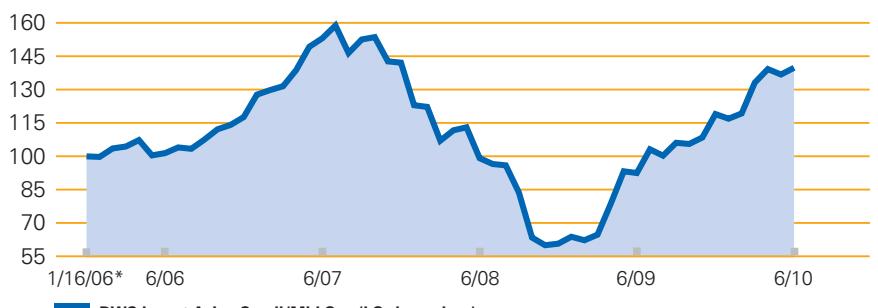

The equity sub-fund for Asian companies with small and medium market capitalizations

The investment focus of DWS Invest Asian Small/Mid Cap was on equities of Asian companies with small and medium market capitalization. In the reporting period from the beginning of January through the end of June 2010, the sub-fund appreciated 17.4% per share (LC share class, BVI method). This result placed it significantly ahead of its benchmark, the FTSE Asia Pacific Small Cap ex Japan (euro), which rose 9.3% (both percentages in euro terms). In addition to solid country allocation, this outperformance was primarily due to the successful selection of individual stocks.

The position in Bank Tabungan Negara was a particularly impressive performer. The company profited from a real estate market recovery and the accompanying increase in demand for real estate loans within Indonesia. The sporting goods manufacturer XTEP International, contained in the portfolio, benefited from its good positioning in the rural regions of China, where local incomes recorded above-average growth.

Against the backdrop of India's comparatively strong domestic economy, the significant overweighting of Indian stocks in the sub-fund positively impacted performance. Apollo Tyres was one of the companies benefiting from growing consumer demand. The shares of this tire manufacturer recorded a solid gain in view of increased product prices and high sales figures in the Indian automotive industry. The lower weighting of Taiwanese stocks worked to the sub-fund's advantage because of their

below-average performance as a result of growing concerns regarding weaken-

ing exports and falling profit margins in the technology sector.

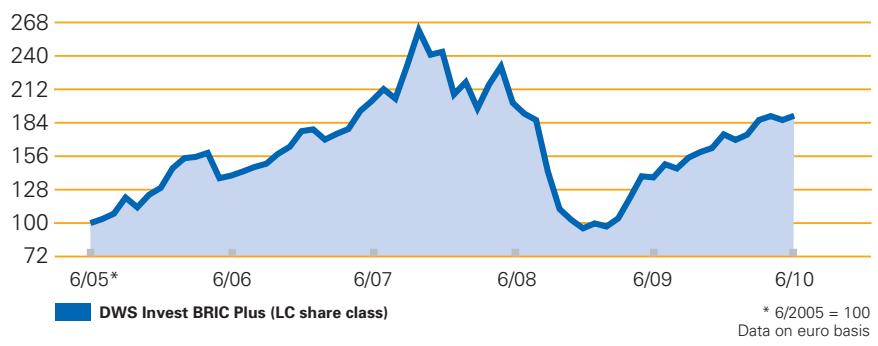

DWS Invest BRIC Plus

Equity sub-fund focusing on emerging markets believed to have promising growth potential

DWS Invest BRIC Plus focused on Brazilian, Russian, Indian and Chinese equities and invested in companies having their registered offices or principal business activity in these emerging markets. The factors supporting the equity markets in the emerging-market countries included, in particular, a continued favorable economic growth in the six-month period from the start of January through the end of June 2010, along with increasing export rates and solid domestic demand. The performance of the sub-fund and index also benefited from the weakness of the euro. Against this backdrop, DWS Invest BRIC Plus recorded appreciation of 8.9% per share (LC share class, BVI method), placing it slightly ahead of its benchmark, MSCI BRIC (+8.8%, both percentages in euro terms).

Preference for investments in Indian and Chinese consumer equities contributed positively to the performance of the sub-fund, given the stabilization of the economy and a recovery in consumer spending. Hero Honda Motors, the market leader for motorcycle production in India, was therefore added to the portfolio, while the existing holdings in Nestle India and Bawang International (shampoo producer) were increased. Given the greater risk tolerance being displayed by market participants, the defensive telecommunications sector was reduced. Some gains were realized in China Mobile following a good performance. Moreover, some of the largest single positions were commodity and energy stocks from Russia and Brazil, e.g. Vale do Rio Doce, Gazprom and Lukoil, which profited from re-

newed strong economic growth – in particular in the emerging markets.

DWS Invest Chinese Equities

Sub-fund focusing on Chinese equities

In the six-month period through the end of June 2010, the equity sub-fund DWS Invest Chinese Equities, which focuses on the Chinese economic area, operated in an investment environment in which the equity markets of the emerging-market countries were supported by ongoing economic growth combined with rising export rates and solid domestic demand. The performance of the sub-fund and index also benefited from the weakness of the euro. Against this background, DWS Invest Chinese Equities recorded an appreciation of 6.6% per share (LC share class, BVI method), putting it behind its benchmark, the MSCI China 10/40, which gained 11.8% (both percentages in euro terms). The main reason for this was the stronger focus, for security reasons, on large, liquid high-quality stocks while market participants, with their increasing appetite for risk, favored smaller secondary stocks over the comparatively more stable blue chips. At sector level, the overweighting of finance companies was retained. Chinese financials and real estate securities participated in the growth in credit products, also especially due to the numerous governmental infrastructure projects (lending to industrial companies) and the overall stronger demand for financial products. These included China Merchants Bank and China Life Insurance which are both held in the sub-fund. Given the economic stabilization, the portfolio also focused on investment in the consumer-goods sector, in which selective gains were realized at the end of the reporting period following good performances from companies such as the car manufacturer Geely Automobile and Xinyi Glass. Holdings of energy stocks,

such as PetroChina and CNOOC, also contributed to the positive performance

in light of the continuing demand for commodities.

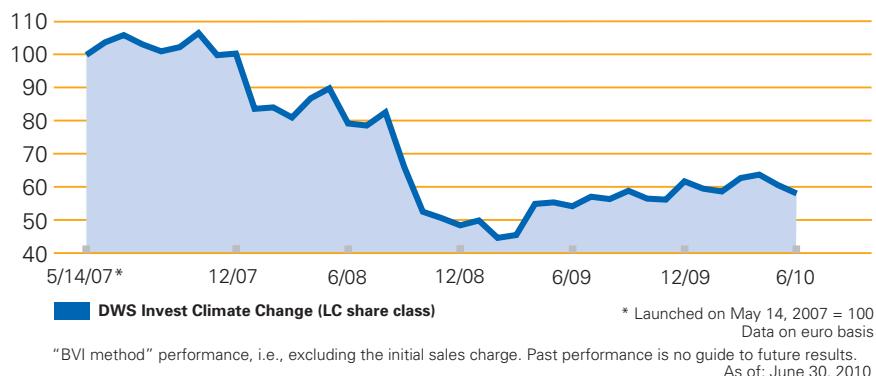

DWS Invest Climate Change

Equity sub-fund focusing on companies with business segments that contribute toward limiting climate change and its effects

DWS Invest Climate Change is primarily involved with companies whose products and services contribute to CO₂ reduction and energy conservation as well as with providers of energy-efficient technologies (mitigation). Moreover, it invests in companies that are involved in the adjustment to climate change and that contribute to coping better with its consequences (adaptation). In a market plagued by uncertainties, which was impacted by concerns about the rise in government debt in some southern European countries and fears of a renewed slowing of the economy, the sub-fund was down 5.9% per share (LC share class in euro, BVI method).

The energy infrastructure sector was built up in anticipation of participating in government investment in the renewal and expansion of electricity networks. For example, the management increased the weighting in Quanta Services, a company that provides services for electricity plants, among others. In contrast, profits were taken on Itron after the share price of the manufacturer of intelligent electricity measuring devices rose sharply on business figures that exceeded expectations. With the euro in a weak phase, the investment focus was also on German companies with a strong export business. For example, the position in Siemens was increased because of the company's good positioning in the wind energy sector and in efficient gas turbines. In addition, equipment suppliers to the photovoltaic industry such as Wacker Chemie, Centrotherm and Roth & Rau were added to the portfolio in order to

allow participation in the volume growth in the solar sector.

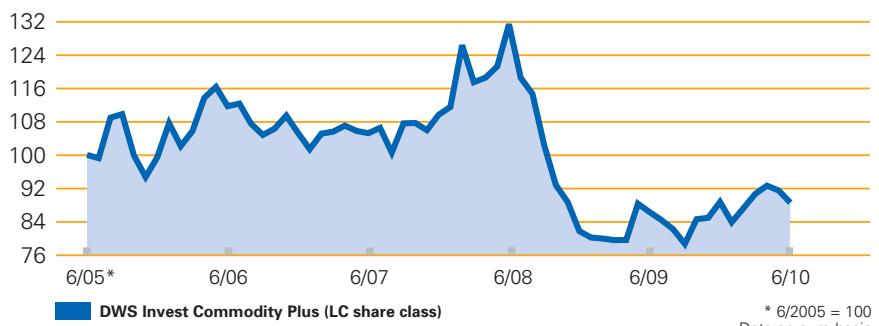

DWS Invest Commodity Plus

The sub-fund for participating in the potential of the commodity markets

DWS Invest Commodity Plus utilized the opportunities in the commodity and commodity futures markets. In so doing, the management used primarily swaps on commodity indices. Direct investments in commodity-related equities rounded off the investment activity. The necessary liquidity for the use of derivatives was provided via a core portfolio of short-term bonds with good to very good credit ratings. The sub-fund closed the reporting period from the beginning of January through the end of June 2010 down 0.2% per share (LC share class in euro, BVI method).

One investment focus was in the energy sector, in which DWS Invest Commodity Plus used swaps to invest in oil and oil products. Given the relatively high reserves, oil was not able to continue last year's price increase during the reporting period. The management held fast however to the comparatively large weighting of commodities, as a further rise in prices was anticipated in the medium term. This assessment was bolstered further by the difficulties experienced in combating the oil leak in the Gulf of Mexico, which augured an increase in the cost of offshore production through more stringent statutory conditions. The investment in gas proved disadvantageous on balance, as production efficiency improvements through new drilling methods led to a significant increase in the supply of this energy source – particularly in the U.S. On the other hand, investments in precious metals yielded an above average

contribution to performance. Gold benefited from strong investor demand due to increasing levels of government debt and volatility in the currency markets. Furthermore, the price of platinum, in particular, was supported by tangibly resurgent demand from the automotive industry.

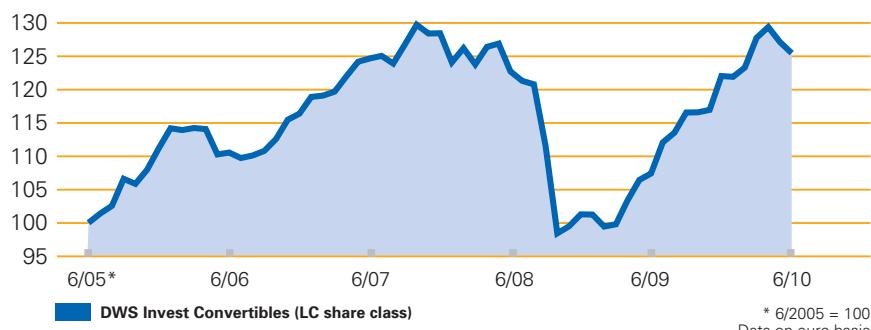

In the area of direct investment in equities, some gains were realized in the mine operator South Gobi Energy following a significant price increase which resulted from progress made in exploiting a coal deposit in Mongolia.

DWS Invest Convertibles

The sub-fund for convertible bonds

DWS Invest Convertibles invested globally mainly in convertible bonds with attractive investment profiles, whereby it systematically hedged its portfolio positions against currency risks. With this orientation, it sought to profit from long-term participation in equity markets while exposing itself to limited risk. In the fiscal six months through the end of June 2010, the sub-fund recorded an appreciation of 2.8% per share (LC share class, BVI method) and thus outperformed its benchmark (see table), which was down 1.0% (both percentages in euro terms). The reason for this outperformance was the portfolio's overall defensive orientation as well as the occasionally increased liquidity ratio. Within its investments in Europe, DWS Invest Convertibles benefited from the IPO of Beni Stabili (real estate), which was then sold at a profit. Portfolio holdings International Power, Dana Petroleum and Sainsbury also turned in positive performances on the strength of takeover rumors. In contrast, the Spanish technology company Abengoa was completely sold off with subsidies in the environmental technology sector being cut around the world. As part of its stronger focus on U.S. convertible bonds rather than on Europe because of the more dynamic economic recovery there, the management increased positions in Gilead Sciences, Hologic, Ford Motor, Allergan and Amgen. In Asia, real estate bonds such as Singapore's CapitaLand were sold off completely for valuation reasons and replaced with consumer goods bonds, such as GOME Electrical Appliances. Purchases of Malaysia's YTL and Korea's KCC as well as the Japanese securities Sharp, Suzuki

DWS INVEST CONVERTIBLES Rating distribution of the bonds in the portfolio*

* Average values based primarily on ratings by Standard & Poor's, Moody's and Fitch

- AAA Extremely strong capacity to pay interest and repay principal
- AA Very strong capacity to pay interest and repay principal
- A Strong capacity to pay interest and repay principal
- BBB Adequate capacity to pay interest and repay principal. Adverse economic or sector-specific conditions are more likely to lead to a weakened capacity to pay interest and repay principal.

BB to B
CCC and lower

Credit quality is adequate, with higher business and financial risk. Interest and principal payments are generally made without adverse effect on credit quality. The non-investment-grade rating is consistent with the company's business model.
The rating is not consistent with the company's long-term business model. The capacity to pay interest and repay principal is potentially reduced in the long term.

As of: June 30, 2010

Motor, Asahi Glass and Orix were justified by attractive interest rates.

DWS Invest Corporate Spread Dynamic

(from July 1, 2010: DWS Invest Income Strategy Credit)

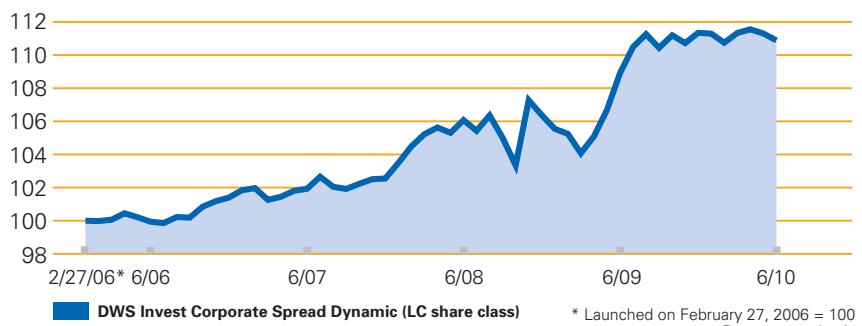

Investing in international credit markets

DWS Invest Corporate Spread Dynamic seeks to achieve a positive long-term investment performance and generate an above-average return in euro in both rising and falling bond markets, particularly with corporate bonds. To this end, the management classifies the credit risks of companies on a worldwide basis. By applying long/short strategies, it is able to systematically exploit differences in valuations of default risks in the credit markets. Stocks and instruments regarded positively are bought (long positions), and/or issues regarded negatively are sold (short positions). Credit risk derivatives, in particular, were used to produce optimized risk-return strategies. To generate basic interest, the sub-fund invested in the near money market sector, in interest-bearing instruments with a short term to maturity and in floating-rate notes.

The sub-fund operated in a climate characterized by a slight recovery of the economy and increasing risks due to significant levels of government debts in the industrial countries. Against this backdrop, DWS Invest Corporate Spread Dynamic registered a decline of 0.4% per share (LC share class, in euro; BVI method) in the six months through the end of June 2010.

In terms of sector allocation, the portfolio was generally broadly diversified. In light of the debt crisis in southern

As of: June 30, 2010

Europe, the management reduced its "long" holdings in corporate and bank bonds in the first quarter and adopted a much more "short" approach in the credit markets, in particular in the high-yield sector. This made a positive contribution to the results. Subsequently given the emerging skepticism among investors regarding the sustainability of the economic recovery, the sub-fund reduced further the "long" positions in corporate bonds which it had retained until then, in order to limit the associated pressure on prices. Slight losses

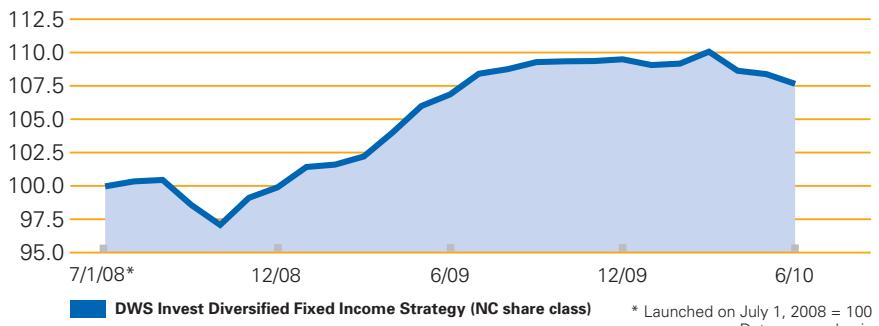

were realized here. By the end of the reporting period, a large proportion of liquid funds had been "parked" in short-term corporate bonds and a relatively high cash position had been maintained. Furthermore, since the second quarter the significance of the credit derivatives portfolio has increased considerably due to stronger fluctuations in the financial markets. With that, DWS Invest Corporate Spread Dynamic was well positioned to take advantage of investment opportunities arising in the future.

DWS Invest Diversified Fixed Income Strategy

Investments in global interest rate, credit and currency markets

The sub-fund seeks to achieve a positive long-term investment performance and generate an absolute return by implementing various alpha strategies focusing on global interest rate, credit and currency markets. DWS Invest Diversified Fixed Income Strategy operated in a climate characterized by a global economic recovery, albeit of varying strength, but also by increasing risks due to significant levels of government indebtedness in the industrial countries and by severe fluctuations in the currency markets. Against this backdrop, it registered a decline of 1.7% per share (NC share class, in euro; BVI method) in the six months through the end of June 2010. In terms of the issuer structure, the management preferred government and corporate bonds of good credit quality (rating of BBB and higher from the leading rating agencies). However, the positions in Greek, Irish and Italian government bonds held in the portfolio had a dampening effect on the sub-fund's performance due to the negative impact of the debt crisis in the European peripheral countries on the prices of these bonds. The interim recovery phase in April was used to partially reduce these holdings in the portfolio. After an initial overweighting, the pressure that came to bear on the euro caused the management to reduce euro holdings in the currency portfolio at an early stage, a move that contributed positively to the results. In addition, the sub-fund participated in the firm trading (amidst fluctuations) of the commodity currencies, in particular the Canadian and the Australian dollars. The overall shorter alignment of the sub-fund's port-

folio also had a dampening effect on the investment performance as longer-term issues from the core markets performed better in light of the skepticism that arose towards the end of the reporting period regarding the sustain-

ability of the economic recovery and the consolidation efforts of certain EU states.

* Additional information about alpha strategies is contained in the full sales prospectus.

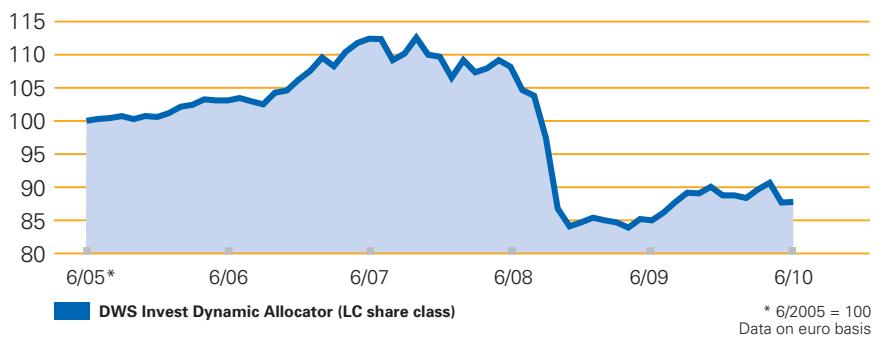

DWS Invest Dynamic Allocator

Access to a variety of hedge fund strategies

DWS Invest Dynamic Allocator invested in particular in the Deutsche Bank Dynamic Focus Index, which reflects the development of the total return from certain Deutsche Bank, iBoxx and other third-party indices, including mainly hedge fund indices. In this way, the sub-fund offered investors access to a diversified range of various hedge fund styles. To this end, assets were invested in interest-bearing securities and derivatives which reflected the performance of the index.

In a difficult and highly volatile market environment, in particular for higher-risk asset classes, DWS Invest Dynamic Allocator was defensively aligned overall. On the bond markets, the Greek debt crisis led to a marked penchant for safe havens with a widening of risk premiums on the bonds of the peripheral countries of the euro zone. The stock markets meanwhile displayed above-average volatility. Against this backdrop, the sub-fund recorded a slight decline of 1.1% per share (LC share class, BVI method, in euro). The Relative Value strategy yielded above-average results, which was attributable to the interim lows in the capital markets. The Credit Arbitrage segment, followed by Convertible Arbitrage profited from the high alpha potential in the convertible-bond market here. The performance of the Equity Market Neutral style on the other hand was not as strong due to hedging issues. Within the long/short equity strategies, the management focused on funds that achieved their performance according to fundamental stand-

points, e.g. systematic macro investments with short-term orientation. In the Event Driven segment, Special Situation Investments disappointed because of their greater equity market-dependence, while Distressed Debt and Merger Arbitrage fared significantly

better; the former with the broader application of hedging strategies and the latter thanks to good investment opportunities through an anticipated rise in M&A activities.

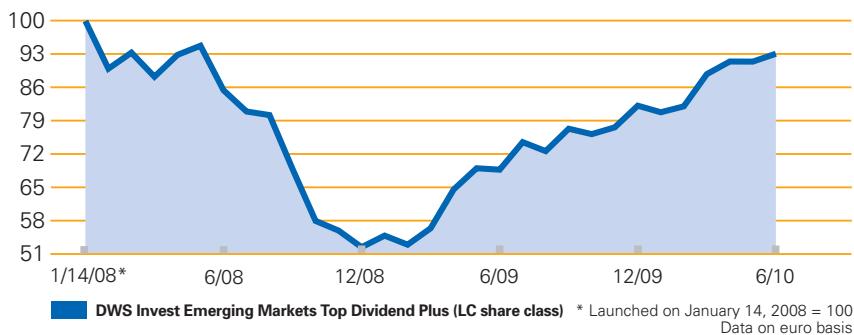

DWS Invest Emerging Markets Top Dividend Plus

Equity sub-fund for companies from the emerging markets

DWS Invest Emerging Markets Top Dividend Plus invested primarily in companies having their registered offices or their principal business activity in the emerging markets. A major criterion when selecting the equities was the dividend yield, as well its sustainability, amount and growth. The sub-fund recorded appreciation of 13.3% per share (LC share class, BVI method) during the six months through the end of June 2010. In a difficult global market environment, the performance of the portfolio benefited from an appreciation of the emerging-market currencies against the euro and also from the higher share of more defensive dividend issues, which were in greater demand from investors and were thus able to record above-average performances. This contributed significantly to the out-performance of DWS Invest Emerging Markets Top Dividend Plus compared to its benchmark MSCI Emerging Markets, which gained 11.3% (both percentages in euro terms).

The overweighting of Indian companies in the sub-fund proved advantageous, against the backdrop of that country's comparatively strong domestic economy. Based as it was on a solid business model, relatively stable cash flows and attractive dividend yields, the investment in the energy utility GAIL India was particularly impressive. Furthermore, investment focused on Chinese consumer stocks such as sporting goods manufacturer Anta Sports Products, which profited from higher demand for its products. In addition, the interim increase in the cash position during phases of price

declines as well as the investment in Turkiye Halk Bankasi, which given the robust health of the Turkish banking sector profited from an increase in in-

vestor interest, made a positive contribution to the sub-fund's performance.

DWS Invest Emerging Yield Plus

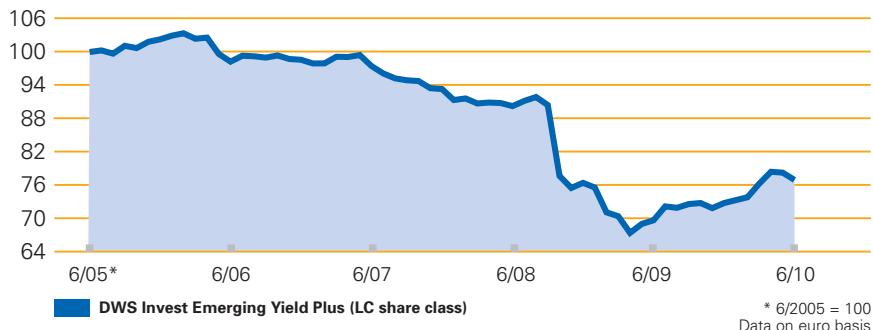

International sub-fund providing access to interest rate and currency trends in emerging-market countries

On the basis of short-term bonds, the sub-fund invested in local currencies of emerging market countries. DWS Invest Emerging Yield Plus operated in a climate characterized by severe exchange rate fluctuations, a slight recovery of the global economy and increasing risks due to significantly higher government debt in the industrial countries. Against this backdrop, the sub-fund achieved an appreciation of 5.7% per share within the six-month period through the end of June 2010 (LC share class, in euro; BVI method).

The management directed its investment focus onto government bonds from the emerging-market countries and structured a broadly diversified portfolio, which yielded a positive results contribution overall.

In terms of its currency holdings, the sub-fund created a "basket" of different local currencies from emerging-market countries, including the Brazilian real, Russian rouble, Indonesian rupiah and Indian rupee, which for the most part traded firmly against the U.S. dollar and particularly against the euro, which served as financing currencies. The sub-fund also participated in the interest rate advantages of these emerging-market currencies compared with euro investments.

As of: June 30, 2010

DWS INVEST EMERGING YIELD PLUS Composition

DWS Invest Euro Bonds (Premium)

The euro bond sub-fund

The objective of DWS Invest Euro Bonds (Premium) is to generate an above-average return in euro. The sub-fund operated in a climate characterized by a slight economic recovery and increasing risks due to significant levels of government debts in the industrial countries. Against this backdrop, it recorded a decline of 0.7% per share (LC share class, BVI method) in the six months through the end of June 2010, placing it slightly behind its benchmark, which gained 2.4% (both percentages in euro terms).

Government bonds formed the investment focus. In addition, the portfolio contained mortgage bonds and a smaller position in emerging markets bonds. Within the framework of its investment policy, the sub-fund applied a covered call writing strategy, which means forward selling bonds held in the sub-fund's assets in order to generate additional income. Therefore the portfolio had a more short-term orientation than its benchmark. As a result, the sub-fund could not however participate to the same degree in the price increase of the government bonds of euro core countries, which largely explains its underperformance. Furthermore, the investment in certain euro peripheral countries, whose government bonds came under pressure as a result of the debt crisis, impacted negatively on the investment result.

At the end of June 2010, the average rate of return of the sub-fund's investments was 3.6% p.a.* with an average term to maturity of 9.4 years; the duration stood at 7.0 years.

As of: June 30, 2010

DWS INVEST EURO BONDS (PREMIUM) Rating distribution of the bonds in the portfolio*

* Average values based primarily on ratings by Standard & Poor's, Moody's and Fitch

AAA Extremely strong capacity to pay interest and repay principal

AA Very strong capacity to pay interest and repay principal

A Strong capacity to pay interest and repay principal

BB Adequate capacity to pay interest and repay principal. Adverse economic or sector-specific conditions are more likely to lead to a weakened capacity to pay interest and repay principal.

BB Credit quality is adequate, with higher business and financial risk. Interest and principal payments are generally made without adverse effect on credit quality. The non-investment-grade rating is consistent with the company's business model.

As of: June 30, 2010

* Average yield of the sub-fund's investments as of the reporting date. This may differ from the nominal yield of the interest-bearing instruments held in the portfolio. The future performance of the sub-fund cannot be derived from this.

DWS Invest Euro Bonds (Short)

The bond sub-fund for the shorter maturity segment

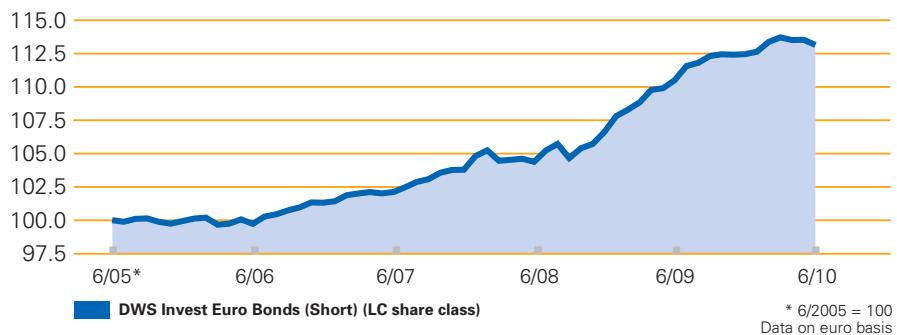

The investment universe of DWS Invest Euro Bonds (Short) consisted of shorter-term euro bonds with good credit ratings (i.e., mainly A and better with selective inclusion of BBB and BB).

The bond sub-fund operated in a climate characterized by a slight economic recovery and increasing risks due to significant levels of government debts in the industrial countries. Against this backdrop, it achieved an appreciation of 0.6% per share in the six-month period through the end of June 2010 (LC share class; BVI method). Despite this performance, however, it did not match its benchmark, which gained 1.2% (both percentages in euro terms).

The management invested heavily in government bonds. At the same time, higher-yielding mortgage bonds, corporate bonds and interest-bearing instruments from financial institutions, among others, were also added to the portfolio. Given the debt crisis in the EU peripheral countries and the associated risk averseness of investors, non-government bonds did not perform as well as government bonds in the European core markets. This and the shorter-term orientation of the sub-fund portfolio compared to its benchmark largely explain the underperformance of DWS Invest Euro Bonds (Short).

As of the end of June 2010, the sub-fund's investments returned an average yield of 2.2% p.a.* at an average term to maturity of 1.7 years.

DWS INVEST EURO BONDS (SHORT) Rating distribution of the bonds in the portfolio*

* Average values based primarily on ratings by Standard & Poor's, Moody's and Fitch

AAA Extremely strong capacity to pay interest and repay principal
AA Very strong capacity to pay interest and repay principal
A Strong capacity to pay interest and repay principal
BBB Adequate capacity to pay interest and repay principal. Adverse economic or sector-specific conditions are more likely to lead to a weakened capacity to pay interest and repay principal.

BB Credit quality is adequate, with higher business and financial risk. Interest and principal payments are generally made without adverse effect on credit quality. The non-investment-grade rating is consistent with the company's business model.

As of: June 30, 2010

* Average yield of the sub-fund's investments as of the reporting date. This may differ from the nominal yield of the interest-bearing instruments held in the portfolio. The future performance of the sub-fund cannot be derived from this.

DWS Invest Euro Corporate Bonds

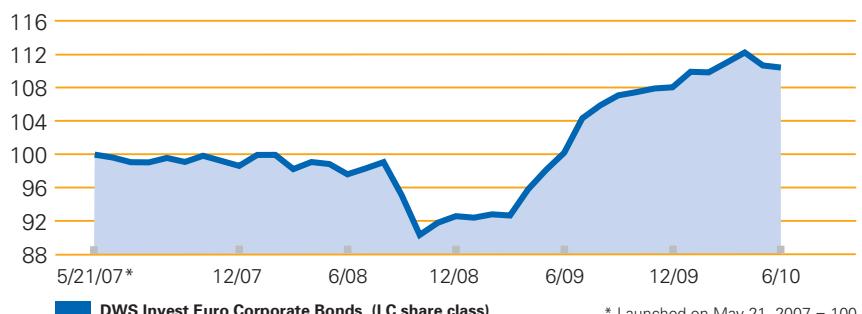

The sub-fund for corporate bonds with good credit quality

The investment universe of this bond sub-fund was primarily comprised of higher-yielding investment-grade corporate bonds. These were issues that had relatively good credit ratings but fell short of the top rating. Foreign currency positions were hedged against the euro. The sub-fund operated in a climate characterized by a slight recovery of the economy and increasing risks due to significant levels of government debts in the industrial countries. Against this backdrop, DWS Invest Euro Corporate Bonds achieved an appreciation of 2.2% per share (LC share class, BVI method) in the six months through the end of June 2010, but it did not quite match its benchmark, which gained 3.6% (both percentages in euro terms). The portfolio generally had broad cross-sector diversification. With an eye to possible supervisory reforms and the heavy investment of European banks in the southern European countries weighted by high government debts, the management underweighted financial bonds early on, which contributed positively to the investment performance. As time progressed, the investors' aversion to risk increased to an unexpected extent due to concerns about the budget deficits in Greece, Italy, Ireland, Spain and Portugal and led to a general sell-off of risk bonds. This situation also involved the more strongly weighted cyclical and raw-material-related bonds as well as subordinated bonds included in the sub-fund, which largely explains the underperformance of DWS Invest Euro Corporate Bonds as compared to the benchmark.

At the end of June 2010, the average yield on the sub-fund's investments was

4.3% p.a., with an average term to maturity of 5.8 years.

* Average yield of the sub-fund's investments as of the reporting date. This may differ from the nominal yield of the interest-bearing instruments held in the portfolio. The future performance of the sub-fund cannot be derived from this.

DWS Invest Euro-Gov Bonds

The sub-fund investing in euro government bonds

In line with its investment policy, the sub-fund invests exclusively in euro government bonds.

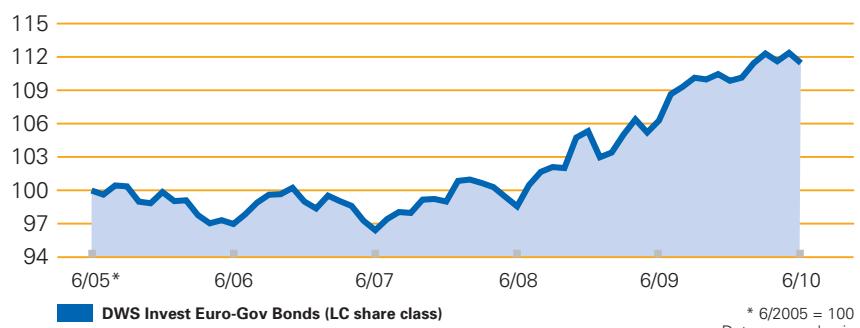

DWS Invest Euro-Gov Bonds operated in a climate characterized by a slight recovery of the economy and increasing risks due to significantly higher levels of government debt in the industrial countries. Against this backdrop, the sub-fund achieved an appreciation of 1.5% per share (LC share class, BVI method) in the six months through the end of June 2010, but it did not match its benchmark, which gained 2.5% (both percentages in euro terms).

In view of the uncertainties on the capital markets due to the debt crisis in the European peripheral countries, the management gave the portfolio of the sub-fund a more short-term orientation as compared to the benchmark to limit price risks stemming from changes in interest rates and yields. However, longer-term bonds performed better than expected, which also explains the underperformance of the sub-fund. In addition, the slight overweighting of Irish government bonds hampered the investment results since these bonds decreased in price in the wake of the Greek debt crisis.

With an average remaining maturity of 8.9 years, the sub-fund's investments yielded 3.6% p.a.* on average at the end of June 2010; the duration stood at 6.4 years as of the reporting date.

DWS Invest European Emerging Sovereigns

Government bonds from emerging-market countries with return potential

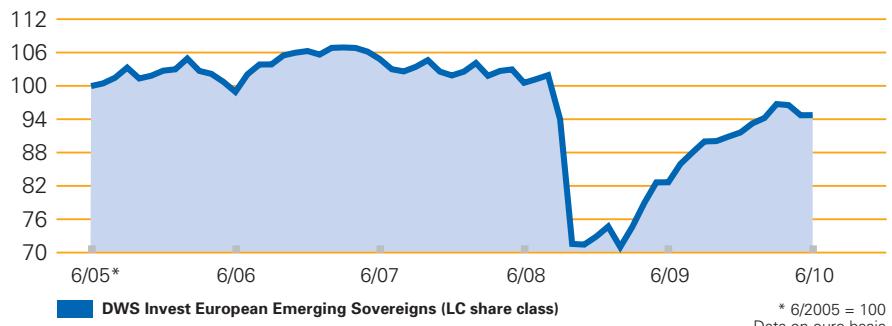

In line with its investment policy, DWS Invest European Emerging Sovereigns invests exclusively in bonds that are issued by government issuers and institutions from the European emerging markets. The sub-fund operated in a climate characterized by a global economic recovery, albeit of varying strengths, but also by increasing risks due to significant levels of government indebtedness in the industrial countries. Against this backdrop, the sub-fund recorded an appreciation of 3.4% per share (LC share class, BVI method) in the six months through the end of June 2010, while its benchmark gained 3.6% in the same period (both percentages in euro terms).

As of the end of June 2010, the average yield on the sub-fund's investments was 5.8% p.a.* with an average term to maturity of 7.1 years.

DWS Invest European Equities

The European equity sub-fund

In the first six months of 2010, the equity markets were very much influenced by the high budget deficits of, in particular, southern European countries. In this environment, the MSCI Europe index recorded a slight loss of 1.2% based in euro. DWS Invest European Equities, which invests primarily in European blue chips, recorded a loss of 2.5% per share (LC share class, BVI method) and was slightly behind its benchmark. The reason for this was due in part to significant price drops in the health care securities Intercell and Grifols. The share price of Intercell, a manufacturer of vaccines, suffered from the fact that a weaker profit was expected. Grifols produces mainly blood plasma and is the market leader in this sector in Europe, but it was faced with increasing competition and falling prices.

Amid growing fears regarding governmental insolvencies, the banking sector came under noticeable pressure on prices. Later in the reporting period, financials from Greece and Spain, such as Banco Santander, were among stocks that were completely sold. The global economic recovery, fueled by the emerging-market countries, justified building up the industrial sector in the portfolio. Here, the sub-fund focused on companies with strong exports, like Siemens. The newly added Swiss SGS, which operates in the area of testing and certifying industrial products, also offered positive prospects for its equity price. Investment in A. P. Moeller – Maersk was expanded since the container shipping company participated in the increasing growth of global trade.

DWS Invest European Select

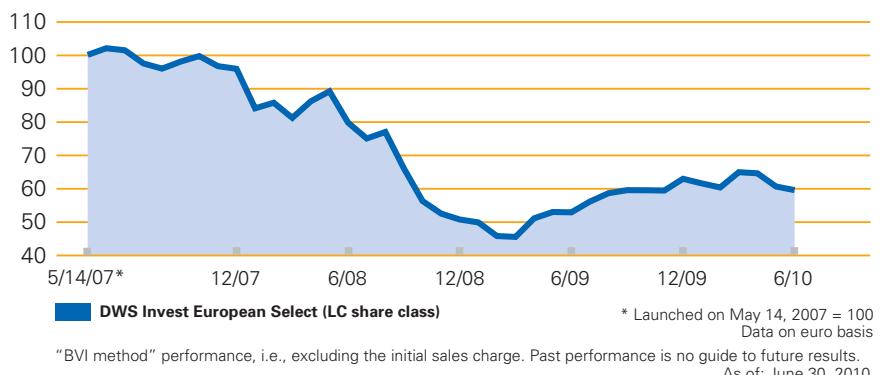

European equity sub-fund managed according to a research-based selection model

The investment process of DWS Invest European Select is now based on a large number of research sources whose performance and persistence is evaluated. The investment decision is made according to a portfolio optimization model oriented toward the best sources.

In the first six months of the fiscal year through the end of June 2010, the sub-fund recorded a loss of 5.4% per share (LC share class, BVI method) and was thus behind its benchmark, the MSCI Europe, which lost 1.2% (both percentages in euro terms).

This situation was due in part to the fact that the portfolio of DWS Invest European Select included financial securities like National Bank of Greece and Banco Bilbao Vizcaya Argentaria, which came under significant price pressure in light of the high level of public debt in their countries. Among technology stocks, the investment in Nokia contributed to the under-performance; the Finnish global leader in the mobile telephones segment disappointed with unsatisfactory sales figures. Positions in less cyclical consumer stocks performed better. These included the liquor manufacturer Diageo and Imperial Tobacco Group; both profited from the economic strength of the high-growth emerging-market countries.

DWS Invest European Select Plus

European equity sub-fund with a research-based selection model and active management

The investment process of DWS Invest European Select Plus is based on a large number of research sources whose performance and persistence is evaluated. The management uses a portfolio optimization model that implements the assessments of the best sources. In addition, the management actively influences the stock selection and weighting based on its own judgments.

In the first six months of the fiscal year through the end of June 2010, the sub-fund recorded a loss of 3.1% per share (LC share class, BVI method) and was thus behind its benchmark, the MSCI Europe, which lost 1.2%. This was due to the below-average performance in the health care sector, among other factors. Here, the investment in the French drug manufacturer Ipsen hampered performance due to negative studies on the effectiveness of a medication. The weighting of cyclical industrial stocks with a strong orientation toward exports was significantly increased in light of the global economic recovery. BMW profited from the noticeable increase in demand on the international automobile market and the equity of the container shipping company A. P. Moeller-Maersk, which was also over-weighted in the portfolio, participated in the growing global trade. The management purchased utilities at a favorable valuation level. In an ensuing phase of price recovery, some gains were realized here.

DWS Invest European Small/Mid Cap

The equity sub-fund for European companies with small and medium market capitalizations

In the six months through the end of June 2010, the European secondary stocks performed significantly better due to their greater growth potential than the European blue chips. DWS Invest European Small/Mid Cap profited disproportionately from this trend and recorded a gain of 6.0% per share (LC share class, BVI method) due to its selective stock-picking approach. Its benchmark increased by 2.6% (all data in euro terms) comprising 50% DJ STOXX Mid and 50% DJ STOXX Small. This outperformance stemmed from the heavier weighting of the basic materials sector, the economically sensitive consumer goods and the reduction of the financial sector.

In commodities and basic materials, the gold mine stock Randgold Resources was added in light of expectations that the price of gold would continue to rise, in part against the backdrop of debt problems; this stock contributed positively to the appreciation of the sub-fund. Selected chemical companies also performed favorably; these included Croda International, which was contained in the portfolio. The company produces substances for example for household cleaners, i.e. for products in the consumer goods segment with relatively stable sales. The cyclical consumer goods segment also made a good contribution. Here, the cable manufacturer and automotive supplier LEONI profited from the noticeable global increase in demand for vehicles. Further, the portfolio benefited from the underweighting of the

financial sector. Banks from southern Europe and Ireland were under noticeable price pressure in light of uncertainties regarding government solvency in

these regions and were sold entirely at an early stage. This involved Marfin Popular Bank, Banca Popolare di Milano and Allied Irish Banks.

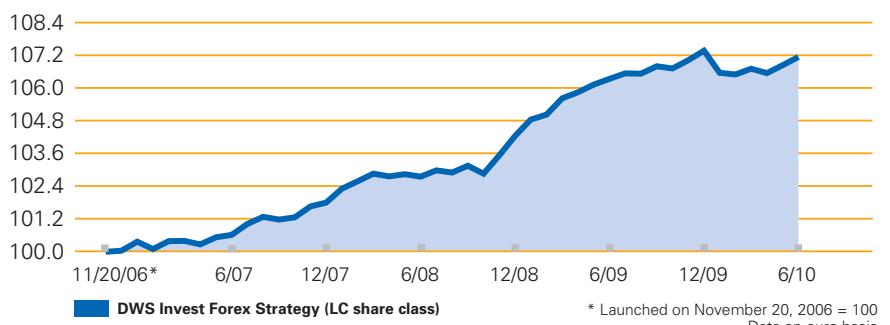

DWS Invest Forex Strategy

(from July 1, 2010: DWS Invest Income Strategy Currency)
Profiting from opportunities in currency trends

Based on a portfolio of euro denominated money market instruments and bonds with short terms to maturity, the sub-fund pursued benefits from exchange rate movements in the international currency markets. As part of its flexible sub-fund concept, the management forward-bought positively regarded currencies (long positions). If currencies were regarded negatively, DWS Invest Forex Strategy went "short", i.e., the currency in question was forward-sold. The sub-fund also used a number of different exchange-rate relationships to diversify the risk in the portfolio. Accordingly, its performance could generally not be derived directly from the movements of the respective exchange rates.

The sub-fund operated in a climate characterized by a slight economic recovery, by increasing risks due to significant levels of government debt in the industrial countries and by severe fluctuations in the currency markets. Against this backdrop, it registered a decline of 0.2% per share (LC share class, in euro; BVI method) in the six months through the end of June 2010.

On the currency side, DWS Invest Forex Strategy used derivatives in its focus on the currencies of the G10 states. The strength of the yen and the weakness of the euro however were more marked than expected, thus hampering the performance of the sub-fund.

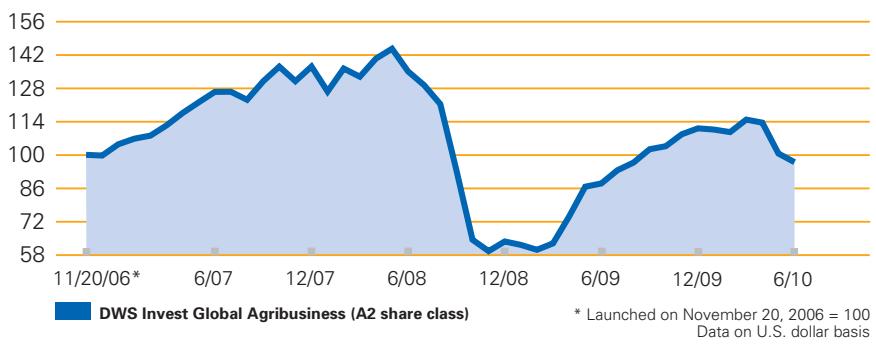

DWS Invest Global Agribusiness

Equity investments in agribusiness and related segments

DWS Invest Global Agribusiness focused on equities of international companies that are active in agribusiness or profit from it. This included, for instance, fertilizer manufacturers and seed producers, producers of crop-protection chemicals and food producers, as well as companies that generally operate in the entire food value-added chain. The sub-fund was unable to avoid the impact of the negative market environment in the six months through the end of June 2010, posting a loss of 12.8% per share (A2 share class in U.S. dollars, BVI method).

Companies from the food retail sectors recorded a below-average performance due to difficulties in passing on price increases to consumers, as did agrochemicals. Here, the demand in the fertilizer business was weaker than expected. This negatively impacted the investment in the agribusiness and food & beverage group Bunge. The investment focus of the fund management remained on the equities with solid balance sheets and business areas that showed growth potential like Kernel, which is included in the portfolio. The share price of the integrated provider of sunflower oil rose markedly due to positive business figures, progress in integrating an acquired company and expanded capacity in oilseed processing. Stora Enso, which operates in the forestry, paper and packaging segment, was also impressive. This company profited from good quarterly results and the announcement of restructuring measures to decrease costs.

Strong diversification

As of: June 30, 2010

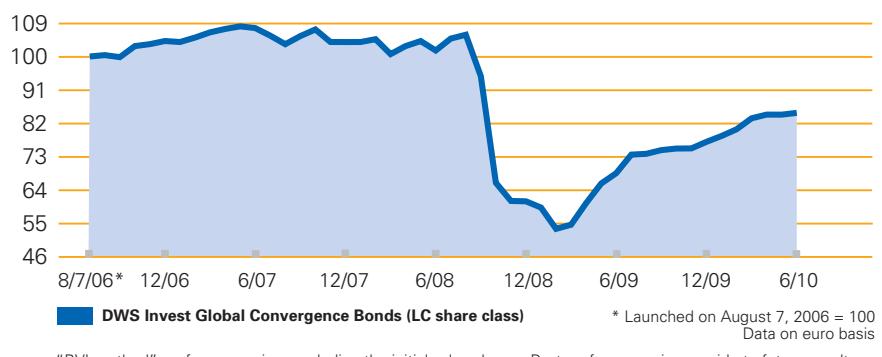

DWS Invest Global Convergence Bonds

Focus on bonds of emerging-market countries

The sub-fund, which is denominated in euro, placed its investment focus on the interest rate markets of convergence countries in local currency and in hard currencies. DWS Invest Global Convergence Bonds operated in a climate characterized by a global economic recovery, albeit of varying strengths, but also by increasing risks due to significant levels of government indebtedness in the industrial countries. Against this backdrop, the sub-fund recorded an appreciation of 10.1% per share (LC share class, BVI method) in the six months through the end of June 2010, while its benchmark gained 11.3% in the same period (both percentages in euro terms).

As of the end of June 2010, the average yield on the sub-fund's investments was 5.5% p.a.* with an average term to maturity of 4.9 years.

DWS Invest Global Emerging Sovereigns

(from July 1, 2010: DWS Invest Emerging Markets Corporates)
International sub-fund denominated in U.S. dollars, focusing on government bonds from emerging-market countries

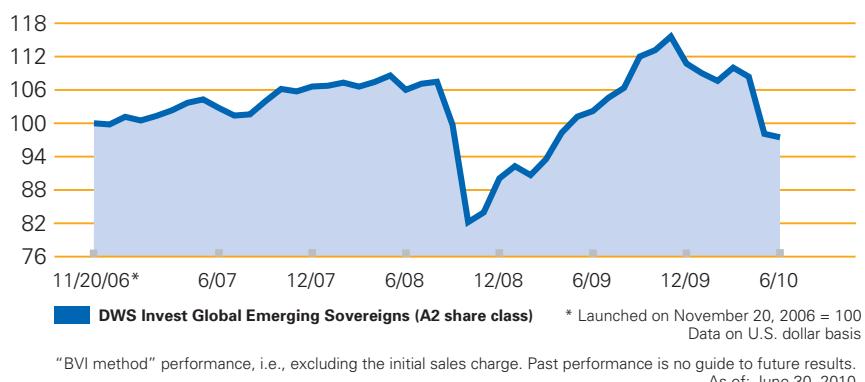

In line with its investment policy, DWS Invest Global Emerging Sovereigns invested exclusively in government bonds from the emerging markets. The sub-fund operated in a climate characterized by a slight recovery of the global economy, by increasing risks due to significant levels of government debt in the industrial countries and by severe fluctuations in the currency markets. Against this backdrop, DWS Invest Global Emerging Sovereigns recorded a loss of 12.0% per share (A2 share class, BVI method) in the six months through the end of June 2010. This decrease was due to investments denominated in euro, whose performance was impacted by the noticeable depreciation in the European common currency. This investment result placed the sub-fund slightly below its benchmark, which fell by 11.3% (both percentages in U.S. dollar terms).

The portfolio was broadly diversified in terms of regions. At the same time, the management made more investments in bonds from Lithuania and Romania, which seemed attractive in light of support given by the EU and IMF to these countries.

At the end of June 2010, the average yield on the sub-fund's investments was 5.6% p.a.*, with an average term to maturity of 5.8 years.

* Average yield of the sub-fund's investments as of the reporting date. This may differ from the nominal yield of the interest-bearing instruments held in the portfolio. The future performance of the sub-fund cannot be derived from this.

DWS INVEST GLOBAL EMERGING SOVEREIGNS Rating distribution of the bonds in the portfolio*

* Average values based primarily on ratings by Standard & Poor's, Moody's and Fitch

- A Strong capacity to pay interest and repay principal
 BBB Adequate capacity to pay interest and repay principal. Adverse economic or sector-specific conditions are more likely to lead to a weakened capacity to pay interest and repay principal.

BB to B Credit quality is adequate, with higher business and financial risk. Interest and principal payments are generally made without adverse effect on credit quality. The non-investment-grade rating is consistent with the company's business model.

As of: June 30, 2010

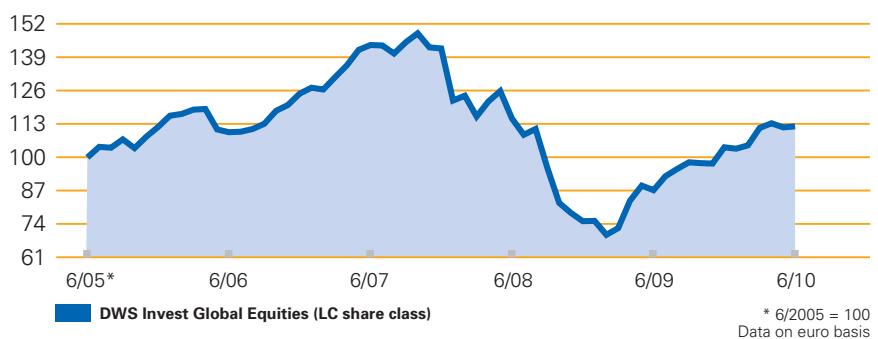

DWS Invest Global Equities

The equity sub-fund that invests worldwide

DWS Invest Global Equities invested globally in solid companies with proven business models and low levels of debt. Also, it selectively included promising equities with recovery potential, known as "turnaround candidates". With this orientation, the sub-fund posted an appreciation of 7.9% per share (LC share class, BVI method) in the fiscal six-month period from the beginning of January through the end of June 2010 and was thus ahead of its benchmark, MSCI World, which gained 5.9% (both percentages in euro terms). The reason for this outperformance was the focus on more defensive sectors and the increased liquidity in the second quarter of 2010 following the growing uncertainties regarding future economic performance.

An above-average contribution came from the more defensive telecommunications sector, which profited from a decreasing margin pressure and possible price increases. Selected international groups, such as Vodafone Group, Telekomunikasi Indonesia, France Telecom and China Mobile, also had high liquidity reserves and attractive dividend yields. In consumer staples, holdings in WM Morrison Supermarkets were expanded. The supermarket chain from the United Kingdom was favorably valued and was able to win market share thanks to good management. Gold mining companies, such as Newmont Mining and Barrick Gold, also remained heavily weighted against the backdrop of the increase in the price of gold. In contrast, industrials were reduced following a very good perfor-

DWS INVEST GLOBAL EQUITIES Five-year performance

mance. In particular, the sub-fund sold cyclical U.S. equities entirely, including Eaton, Deere and Terex, and secured profits.

DWS Invest Global Equities 130/30

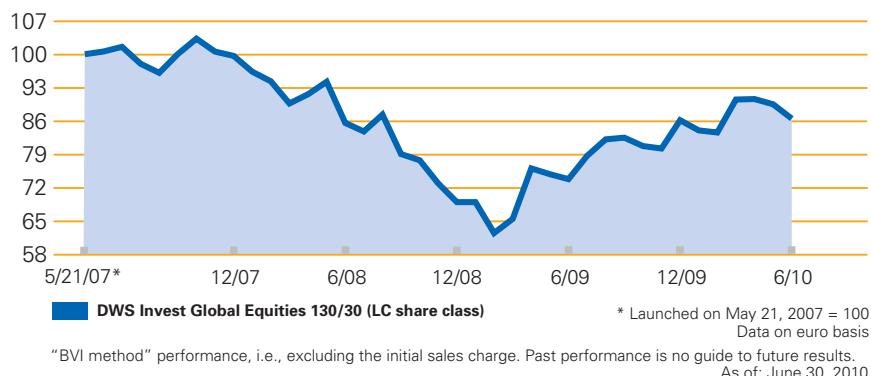

Globally investing equity sub-fund with a derivative component

The sub-fund DWS Invest Global Equities 130/30 focused on equities of international companies. In addition to the direct investments in equities, long/short strategies using derivatives were also applied for the 130/30 concept in order to benefit from relative out-/underperformance of individual equities or indices. The positions established in this manner, which anticipated declines in certain equity prices and index levels (short positions) and simultaneous rises in other securities (long positions), accounted for up to 30% of the sub-fund's net assets. With this orientation, the sub-fund recorded a slight appreciation of 0.4% per share (LC share class, BVI method) in the six-month period through the end of June 2010, but was thus behind its benchmark, the MSCI World, which gained 5.9% (both percentages in euro terms).

Performance of DWS Invest Global Equities 130/30 was poor despite its defensive nature, impacted not only by the more strongly weighted utilities sector (E.ON, RWE), but also by the overall high percentage of European stocks which suffered as a result of difficulties like the financial crisis in Greece.

At sector level, the management favored, among others, German and Italian industrial and technology stocks which were likely to profit from the devaluation of the euro due to their largely global orientation. Furthermore, Siemens was added to the portfolio as its shares were attractively valued and the company showed positive results from its restructuring activities. Holdings in U.S. industrial stocks such as Emerson Electric were reduced following a positive performance in order to secure capital gains once they reached

a comparatively high share price. Atlantia proved a disappointment in the transportation & infrastructure segment. The toll road operator suffered as a result of its debt-equity ratio and the overall difficult market environment in Italy.

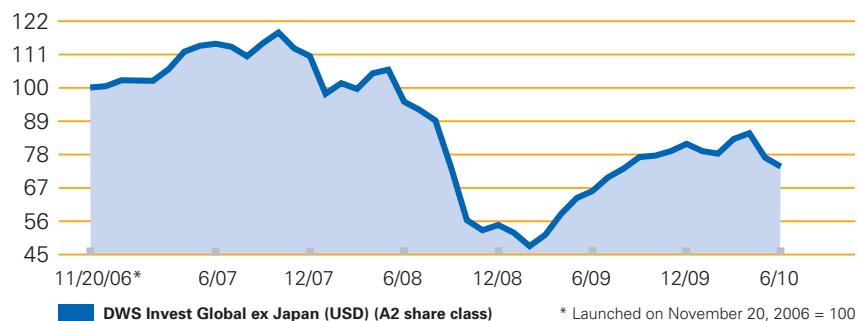

DWS Invest Global ex Japan (USD)

Investing in international equities, excluding Japanese stocks

DWS Invest Global ex Japan (USD), which invests globally with the exception of Japan, recorded a loss of 9.2% per share (A2 share class, in U.S. dollars, BVI method) in light of the difficult environment on the stock markets in the six months through the end of June 2010.

The increased uncertainty regarding further economic development hampered the position in Hewlett-Packard, in particular. The IT manufacturer suffered from fears of a global economic slowdown due to the strong increase in government debt and an associated weakening in demand for computers and electronics. In contrast, impressive investments in mining companies, such as Newmont Mining, Gold Fields and AngloGold Ashanti, recorded a solid performance, due to the increased price of gold. Selected equities from the emerging markets also recorded a better performance than the general market, such as the Mexican mobile phone provider America Movil, whose share price turned in an above-average performance because of the company's successful expansion and the announcement of a stock buyback program, among other reasons. Hindustan Unilever, which was contained in the portfolio, received a boost from the announcement of a buyback of its own shares; in addition, the Indian consumer goods manufacturer also had strong operating results. However, the performance for Exxon Mobil lagged behind expectations due to the decline in the price of oil and concerns that

offshore production will become more expensive, caused mainly by stricter regulatory requirements resulting from the oil crisis in the Gulf of Mexico.

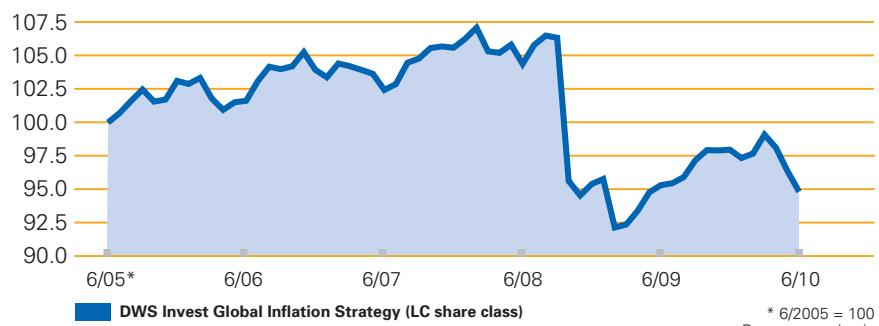

DWS Invest Global Inflation Strategy

The sub-fund for inflation-related investments

DWS Invest Global Inflation Strategy seeks to achieve an above-average return by combining a bond portfolio (focus on inflation-indexed interest-bearing instruments) with an alpha overlay strategy. The overlay may comprise up to 30% of the sub-fund assets through other investments such as equities, commodities and real estate. Derivatives may be used to generate income through price fluctuations and price differences.

The sub-fund operated in a climate characterized by a slight recovery of the economy and increasing risks due to significant levels of government debt in the industrial countries. Against this backdrop, DWS Invest Global Inflation Strategy recorded a decline of 3.2% per share (LC share class, BVI method) in the six months through the end of June 2010, placing it behind its benchmark, which gained 2.8% (both percentages in euro terms). The investment focus was on inflation-indexed bonds so-called "inflation linkers". However, these interest-bearing instruments declined in price in the face of weakening investor expectations of inflation due to rising doubts in the sustainability of the economic recovery. In terms of issuers, the management favored government bonds, including interest-bearing instruments of near-government issuers. The portfolio also included corporate bonds from the commodities sector and, to a lesser extent, equities from the utilities segment, which were disappointing, however. This fact plus the price decline of the inflation linkers essentially explain the underperformance of the sub-fund. The portfolio was also invested in emerging markets bonds, such as

Turkish and Mexican bonds, which contributed positively to the result. With an average remaining maturity of 9.7 years, the sub-fund's investments yielded 4.2% p.a.* on average at the end of June 2010; the duration stood at 3.5 years as of the reporting date.

* Average yield of the sub-fund's investments as of the reporting date. This may differ from the nominal yield of the interest-bearing instruments held in the portfolio. The future performance of the sub-fund cannot be derived from this.

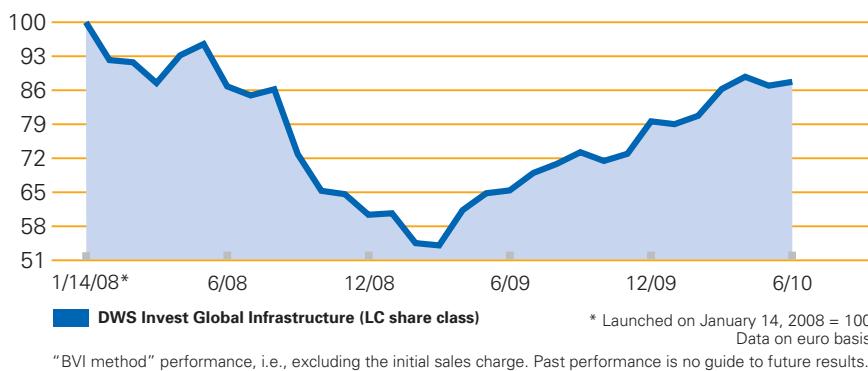

DWS Invest Global Infrastructure

The equity sub-fund for participating in the potential of the global infrastructure sector

DWS Invest Global Infrastructure invested worldwide with a focus on equities of companies that operated infrastructure facilities or which were involved in the modernization or development of infrastructure. In the six months through the end of June 2010, the sub-fund recorded an appreciation of 10.2% per share (LC share class, BVI method) and was significantly ahead of its benchmark, UBS Developed Infrastructure & Utilities, which gained +3.5% (both percentages in euro terms); this performance was mainly due to the above-average performance contribution of equities from the emerging markets included in the portfolio.

The position in the Russian railway company, Globaltrans, recorded a noticeable appreciation. The private freight train operator participated in the recovery of the transportation sector in the improving economic environment; it was also able to increase its market share compared to the government railway company. Moreover, the sub-fund benefited from a price recovery of the Indian construction company IVRCL, which profited from the announcement of new infrastructure projects in the area of road construction on the part of the Indian government. The increasing prosperity in the emerging-market countries made the investment in toll road operators appear promising against the backdrop of stronger demand for automobiles. OHL Brasil and Sichuan Expressway were added to the portfolio in order to participate in the expected increase in traffic volume. Following a solid performance, the fund management realized some gains in Chinese gas utilities

DWS Invest Global Macro Opportunities

(from July 1, 2010: DWS Invest Income Strategy Dynamic)

The sub-fund with an absolute return target (no guarantee) and multi-asset concept

With its multi-asset concept, the sub-fund seeks to achieve the highest possible appreciation of capital in euro by using various "alpha strategies" across various asset classes.

DWS Invest Global Macro Opportunities operated in a climate characterized by a slight recovery of the economy and increasing risks due to a significantly increased level of government debts in the industrial countries. Against this backdrop, it achieved an appreciation of 1.2% per share within the six-month period through the end of June 2010 (LC share class, in euro; BVI method).

On the currency side, euro investments continued to form the focus. Also, the management invested in foreign currencies, including currencies from the emerging markets and from the dollar area, which made an overall positive contribution due to the weak euro.

Government bonds included in the portfolio were reduced in favor of higher-yielding corporate bonds and emerging market bonds. In addition, the sub-fund used the differences between the yields of government bonds of different countries, which, like the bonds of emerging market countries, also made an overall positive contribution to the investment results.

DWS INVEST GLOBAL MACRO OPPORTUNITIES Composition

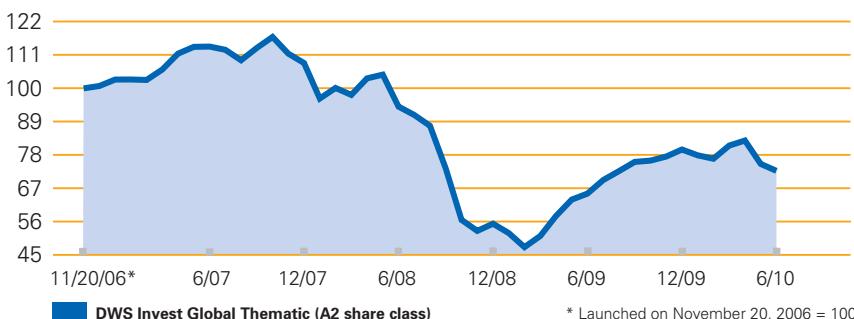

DWS Invest Global Thematic

**Investing in international equities selected according to social,
political and economic trends or issues**

The internationally oriented sub-fund DWS Invest Global Thematic focused on equities of companies that, in the opinion of the management, profited from global themes or trends of a social, political and economic nature. Against the backdrop of the difficult climate on the stock exchanges, the sub-fund recorded a drop of 8.8% per share (A2 share class, BVI method) in the reporting period from the beginning of January through the end of June 2010, but nevertheless managed to outperform its benchmark, the MSCI World, which was down 9.8% (both percentages in U.S. dollar terms). In view of the increasing uncertainty regarding the future development of the economy, the investments made as part of the Market Hedge theme were particularly advantageous. Within this segment, the sub-fund invested in companies whose operations are in the tangible assets sector, which has traditionally offered greater protection against inflation and market crises. Investments were made in this sector in the gold mine operators Newmont Mining, Gold Fields and AngloGold Ashanti. These companies profited from the continued rise in the gold price in the wake of the debt crisis of some southern European countries.

The Large Units theme segment concentrated on companies that participated in the growth of the middle class and consumer spending in the emerging markets. For example, DWS Invest Global Thematic was invested in the Mexican mobile phone provider America Movil, whose share price turned in

an above-average performance because of the company's successful expansion and the announcement of a stock buy-back program, among other reasons. Hindustan Unilever, which was contained in the portfolio, received a boost from the announcement of a buyback of its own shares; in addition, the Indian consumer goods manufacturer also had strong operating results.

In contrast, the portfolio of the Asymmetric Negotiators theme recorded a

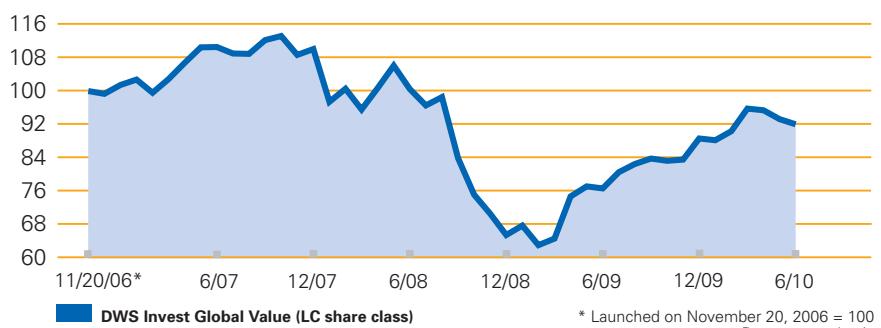

below-average performance during the reporting period. In this segment, the sub-fund invested in companies that had access to resources that were otherwise scarce, which gave them a stronger position in price negotiations. In this area, Exxon Mobil, in particular, was down as a result of the drop in the price of oil. The company was also hurt by fears that off-shore production would be made more expensive by stricter regulatory requirements resulting from the oil crisis in the Gulf of Mexico.

DWS Invest Global Value

Global equity sub-fund managed according to a value-based investment style

The sub-fund DWS Invest Global Value invested in equities considered by the management to be undervalued, top-quality stocks with good future upside potential. While the global economy initially continued to stabilize in the first half of 2010, the simultaneous discussions of rising government debts had a dampening effect on prices and volatility on the exchanges rose. Against this backdrop, DWS Invest Global Value posted an appreciation of 3.8% per share (LC share class, BVI method) in the first half of the 2010 fiscal year, while its benchmark, the MSCI World Value, gained 5.5% in the same period (both percentages in euro terms). Due to different calculation dates for setting prices, the direct comparison of performances was difficult in this case, since developments on the U.S. equity market through the end of the month are accounted for in the benchmark index but they do not affect the calculation of the performance at sub-fund level until later. The portfolio's previous cautious orientation, with a focus on solid companies with proven business models, was largely retained in view of the volatility on the exchanges in the six-month period from January through the end of June 2010. In the technology and telecommunications sectors, the sub-fund sold Nokia and Deutsche Telekom, among others. The management was of the opinion that, despite solid business models, both of these stocks had limited potential for price gains. Positions in the health care sector, in contrast, were slightly increased. In this sector, companies such as Britain's AstraZeneca, a leading deve-

DWS INVEST GLOBAL VALUE Performance since inception

loper of innovative medications, made a positive contribution to the results. Positions in the underweighted financial sector also did well. These included Canada's Intact Financial, which was spared the recent turbulence in the global capi-

tal markets because of its strong focus on the domestic market. In addition, with the stabilization of the consumer markets, investments in consumer staples, such as the Swiss foodstuffs manufacturer Nestlé, were increased.

DWS Invest Gold and Precious Metals Equities

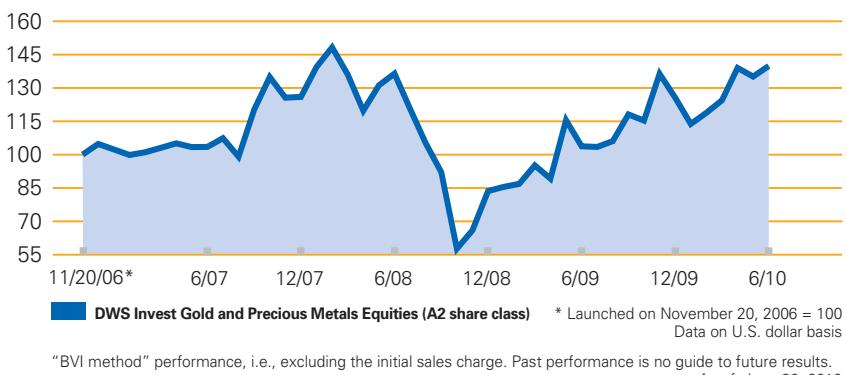

Sub-fund focusing on equities of companies in the precious-metals sector

DWS Invest Gold and Precious Metals Equities invested in equities of international companies whose operations concentrated on the exploration for and extraction and production of precious metals such as gold, platinum, palladium and silver. In the reporting period from the beginning of January through the end of June 2010, the sub-fund appreciated by 11.4% per share (A2 share class, in U.S. dollar terms, BVI method).

In the first half of the fiscal year, the gold mine stocks contained in the portfolio profited from strong investor demand for gold which pushed the price of the precious metal to above USD 1,250 per troy ounce at times as a result of increased government debt and volatile currency markets. Red Back Mining recorded a particularly strong performance. The gold mining company made progress in developing reserves in Mauritania and also profited from takeover speculation. Another impressive performer was Anatolia Minerals Development. The company's share price rose significantly in the expectation that it would start gold production soon. DWS Invest Gold and Precious Metals Equities also opened a position in Canaco Resources. After positive, promising drilling results from a project in Tanzania, the fund management saw further potential for the discovery of gold by the exploration company.

The portfolio's weighting of platinum and palladium, which are used in the manufacture of automotive catalytic converters, among other things, was increased slightly in light of the eco-

nomic recovery through purchases of mining companies. New additions, including Impala Platinum, were included in order to allow the sub-fund to participate in the rising demand from the automotive industry.

DWS Invest Government Liquidity Fund

The money market fund with a conservative investment approach

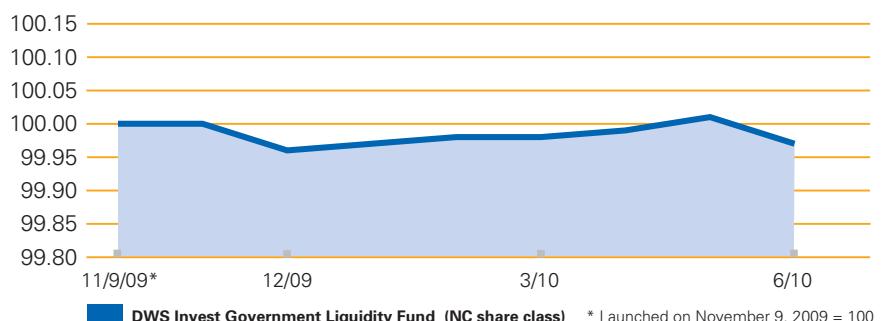

In line with its investment policy, the sub-fund DWS Invest Government Liquidity Fund invested exclusively in transferable euro-denominated debt instruments, bonds or money market instruments. Issuers included member states of the European Union, OECD countries or their local authorities. The maximum duration was 90 days.

In the first half of 2010 the world economy continued to stabilize, supported by increases in capital spending by companies and the recovery of global trade. At the same time, however, in the second quarter debates about increases in government debt, especially in the southern European countries, weighed on the overall climate in the capital markets and dampened expectations of a quick and sustained recovery. In addition, interest rates remained at a very low level. In this investment climate, DWS Invest Government Liquidity Fund generated a return of 0.0% per share in the first half of the fiscal year (NC share class, BVI method).

In the reporting period from the beginning of January through the end of June 2010, the management focused on bonds from European core countries as well as other countries with good to very good ratings. Bonds from German federal states were included in the portfolio. Time deposits were also used on a daily basis.

As of the end of June 2010, the average term to maturity of the sub-fund's

DWS Invest Italian Equities

Equity sub-fund for Italian companies

Against the backdrop of high government debt in Italy, the equity market there weakened significantly. In this environment, DWS Invest Italian Equities, which invests predominantly in Italian blue chips, supplemented by promising mid-caps and small-caps, recorded a decline of 11.9% per share (LC share class, BVI method) for the first half of the fiscal year through the end of June 2010. However, with this performance the sub-fund outperformed its benchmark, which was down 16.2%.

This relative outperformance was principally attributable to the fact that holdings in the financial sector, which came under strong pressure, were significantly reduced early on. The sector was hurt primarily by the uncertainties regarding the impending changes in banking regulations in Europe. In addition, stock picking in the industrial sector also had a positive impact on the subsequent performance of the sub-fund. Prysmian was added to the portfolio. The company is among the world's leading manufacturers of cable for high-voltage networks and was active in a market with strong growth potential. The management also focused selectively on consumer goods stocks with comparatively stable business such as Parmalat and Campari in the food and beverages sector; these stocks were made more attractive by the increasing volatility on the exchange and they also turned in above-average performances. The same held true for Autogrill, the high-growth operator of restaurants on highways and

in airports that is contained in the portfolio. The company also benefited from its very high cash flow. Among energy stocks, the oil services company Saipem profited from higher investments by integrated production com-

panies seeking to avoid future supply bottlenecks. Some profits were taken on Saipem after its share price rose significantly.

DWS Invest Japanese Equities

The sub-fund for Japanese companies

In the reporting period from the beginning of January through the end of June 2010, DWS Invest Japanese Equities appreciated 9.0% per share (LC share class, BVI method). This put the sub-fund somewhat behind its benchmark index, the TOPIX 100, which gained 11.7% (both percentages in euro terms). Among the factors negatively affecting the sub-fund's performance were positions in export-oriented companies, e.g., automotive stocks and wholesalers such as Mitsubishi, which suffered as a result of the strong yen and fears of a renewed slowing of the economy. In addition, expectations of additional capital increases in the banking sector had a negative effect on investments in financial institutions like Mizuho Financial Group.

Telecoms provider NTT DoCoMo, whose weighting in the portfolio was increased, turned in a solid performance despite a Japanese economic environment that was marked by political uncertainty and deflation; the company was preferred by investors because of its comparatively defensive business model and strong dividends. An increase in the position in Aeon also proved advantageous. The retailer benefited from increased investor interest as a result of restructuring measures. The railway companies Central Japan Railway and East Japan Railway, which are contained in the fund, also recorded above-average performances on the strength of rising rates for freight and an increasing shift of transportation from road to rail.

As of: June 30, 2010

DWS INVEST JAPANESE EQUITIES Broadly diversified portfolio

DWS Invest New Resources

The equity sub-fund focused on the water, renewable energy and agrochemical sectors

DWS Invest New Resources invested primarily in selected stocks of companies operating in the water, renewable energy and agricultural industries, with individual selections generally made using the stock-picking approach. In the six months through the end of June 2010, the sub-fund recorded a drop of 5.4% per share (LC share class, in euro terms, BVI method).

In a market plagued by uncertainties, which was impacted by concerns about the rise in government debt in some southern European countries and fears of a renewed slowing of the economy, renewable energies was one of the hardest hit sectors. This applied to the position in wind turbine manufacturer Gamesa, for example, which suffered due to concerns about a possible reduction in feed-in compensation in Spain. Solar industry suppliers did better, as they profited from the general growth in volume in the industry. In this segment, we took profits and closed positions in the Japanese companies Toyo Tanso and Nippon Sheet following their above-average performance. In their place, the fund management further increased the weighting of German photovoltaic equipment suppliers, e.g., SMA Solar Technology (inverters) and Wacker Chemie (high-quality polysilicon). Both companies benefited from the increase in the installation of solar systems as well as stronger export business as a result of the euro's devaluation. In addition, phases of market weakness were used to selectively increase the weighting in agricultural companies. The portfolio's holdings in agricultural machinery

producers AGCO and Deere were increased. The position in Deere, one of the world's leading tractor manufac-

turers, profited in particular from the growth of the company in South America and increasing demand in the U.S.

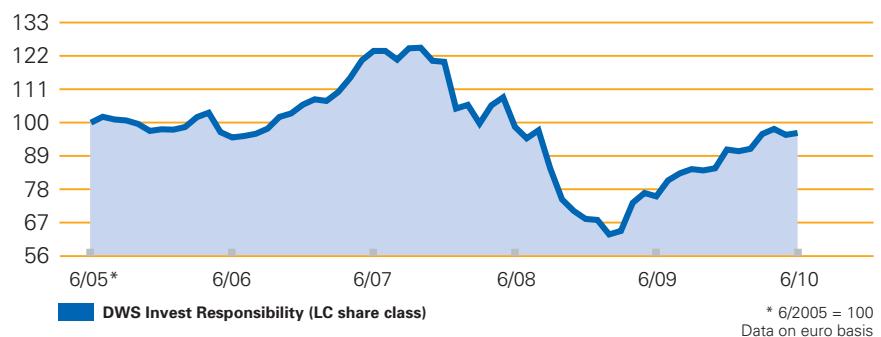

DWS Invest Responsibility

The international equity sub-fund with a responsibility approach

The main area of investment of DWS Invest Responsibility was equities of international companies that, in keeping with the responsibility approach (sustainability principle), found ways to achieve a balance of economic, social and ecological interests, thereby creating a good foundation for long-term earnings growth. Emphasis was also placed on companies distinguished by their environmentally friendly business models, which allowed them to contribute to a structural change as regards the protection of the environment.

With this orientation, the sub-fund posted an appreciation of 6.0% per share (LC share class, BVI method) in the fiscal six-month period from the beginning of January through the end of June 2010 and was thus slightly ahead of its benchmark, MSCI World, which gained 5.9% (both percentages in euro terms). In the reporting period DWS Invest Responsibility focused on more defensive sectors and increased its liquidity in the second quarter of 2010 following the growing uncertainties regarding future economic performance. An above-average contribution came from the less cyclical telecommunications sector, which profited from a decreasing margin pressure and possible price increases. Selected international groups, such as Vodafone Group and France Telecom, also had high liquidity reserves and attractive dividend yields. In consumer staples, holdings in WM Morrison Supermarkets were expanded. The supermarket chain from the United Kingdom was favorably valued and was able to win market share thanks to good

management. Gold mining companies, such as Newmont Mining, also remained heavily weighted against the backdrop of the increase in the price of gold. In contrast, industrials were

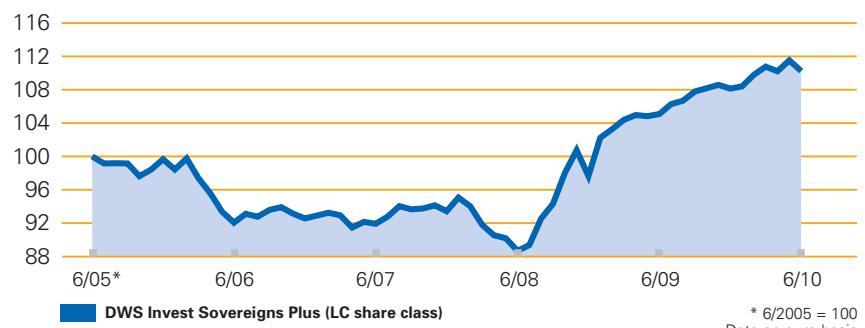

reduced following a very good performance. In particular, the sub-fund sold cyclical U.S. equities entirely, including Eaton and Deere, and secured profits.

DWS Invest Sovereigns Plus

The sub-fund focusing on government bonds of international issuers with top credit ratings

In line with its investment policy, DWS Invest Sovereigns Plus invested in euro government bonds in order to track the performance of its benchmark, the iBoxx Eurozone Sovereigns 3-5Y TR index. The management also implemented various "alpha strategies" within the global bond and currency markets. The generation of additional returns were sought through these strategies. The sub-fund operated in a climate characterized by a slight recovery of the economy, by increasing risks due to significant levels of government debt in the industrial countries and by severe fluctuations in the currency markets. Against this backdrop, the sub-fund recorded a gain of 2.0% per share (LC share class, BVI method) in the six months through the end of June 2010, placing it slightly behind its benchmark, which gained 2.2% (both percentages in euro terms). Euro government bonds, most recently representing approximately 97% of the sub-fund's assets, made up the core portfolio. Within the framework of its currency holdings and with its long positions in the U.S. dollar and in the commodities-driven New Zealand and Australian dollars, the sub-fund profited from their appreciation against the euro. However, the short position in the British pound, which despite the continuing deteriorating economic data performed positively in the second quarter on the basis of hopes regarding the new government, had a dampening effect. On the bond side, the long positions in five and ten-year U.S. government bonds made a particularly positive contribution to returns overall. Their performance was offset however

* Average yield of the sub-fund's investments as of the reporting date. This may differ from the nominal yield of the interest-bearing instruments held in the portfolio. The future performance of the sub-fund cannot be derived from this.

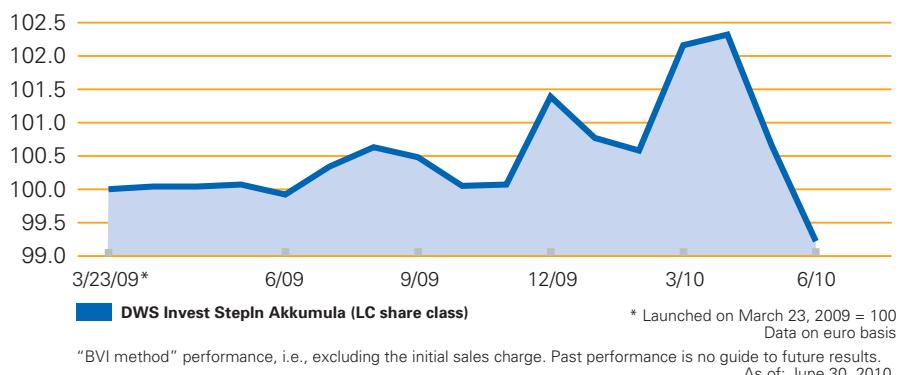

DWS Invest StepIn Akkumula

Step-by-step investment in the global equity market

DWS Invest StepIn Akkumula invests its assets step by step, in accordance with its investment policy, from money market investments into a target portfolio with equities. For the investor, an equity portfolio is gradually built up using the cost average effect* – similar to a fund savings plan. Since April 2009, the management has been allocating the assets in monthly steps, in accordance with the StepIn strategy. Around 30% of the fund volume has now been reallocated in high-quality equities. After the complete reallocation by May 2013, the sub-fund should mostly correspond to DWS Akkumula, which focuses on blue chips worldwide.

During the fiscal six-month period from the beginning of January through the end of June 2010, the sub-fund recorded a loss of 2.1% per share (LC share class, BVI method). The performance was dampened not only by the more strongly weighted utilities sector (E.ON, RWE), which performed poorly despite its defensive nature, but also by the overall high percentage of European stocks which suffered as a result of difficulties like the crisis in Greece. The currency hedging of equity positions in Japanese yen, which appreciated significantly during the reporting period, also had a negative impact on fund performance. Given the uncertainties that exist regarding the future development of the economy, DWS Invest StepIn Akkumula favored defensive sectors. The over-weighting of the telecom sector made a positive contribution to performance. Selected international companies like

DWS INVEST STEPIN AKKUMULA Composition

Vodafone Group and Deutsche Telekom profited because of their defensive nature, above-average dividend yields and strong cash flow generation. As of the reporting date, the sub-fund's assets were in large part invested in European government bonds as well as in DWS near money market funds.

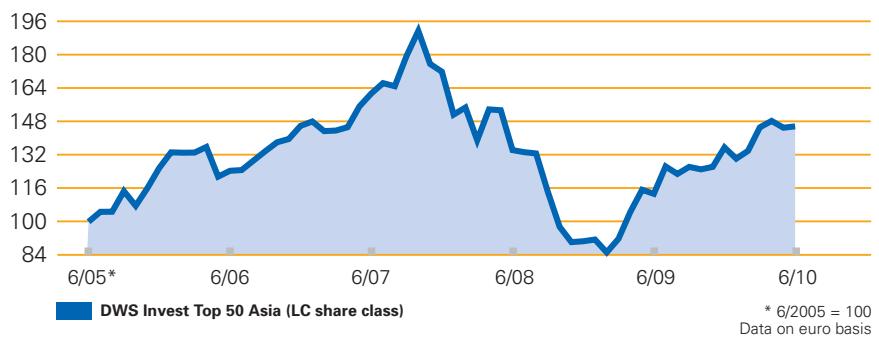

* The cost average effect occurs when constant amounts of money are invested in securities at regular intervals. Fluctuations in the values of the securities cause the investor to obtain shares at a more favorable average price when investing in constant installments than would be the case if a constant quantity of shares is purchased at different prices at regular intervals. That is because, automatically, fewer shares are purchased when share prices are high, and correspondingly more when share prices are low.

DWS Invest Top 50 Asia

Fifty top companies in the Asian region

DWS Invest Top 50 Asia, which focuses on Asian blue chips, operated in the six-month period through the end of June 2010 in an investment environment in which the equity markets of the emerging-market countries were supported by ongoing economic growth with rising export rates and a solid domestic demand. The performance of the sub-fund and index also benefited from the weakness of the euro. Against this backdrop, DWS Invest Top 50 Asia recorded an appreciation of 7.4% per share (LC share class, BVI method), placing it behind its benchmark which gained 13.6% (both percentages in euro terms). The main reason for this was the underweighting of Japanese securities in the portfolio. In view of the below-average performance of the equity markets, this was the right move, but, in currency terms, it led to the sub-fund's underperformance, because the yen appreciated significantly against the euro. By country, the overweight in China was retained because of good economic data and the focus on consumer goods in India was further strengthened. Given the economic stabilization and the renewed rise in consumption numbers, investments in the Indian subcontinent, with its very young population, seemed to offer good prospects. For this reason, Hero Honda Motors, a market leader in motorcycle production in India, was added to the portfolio, as was Astra International from the same industry in Indonesia, which has a similar age structure. Asustek Computer, the Taiwanese manufacturer of computer hardware was almost completely sold off after it outsourced part of its production

to Pegatron Technologies, since this created uncertainty regarding the future listing on the exchange. The sub-fund

closed the position in HSBC because of fears of defaults in the European lending business.

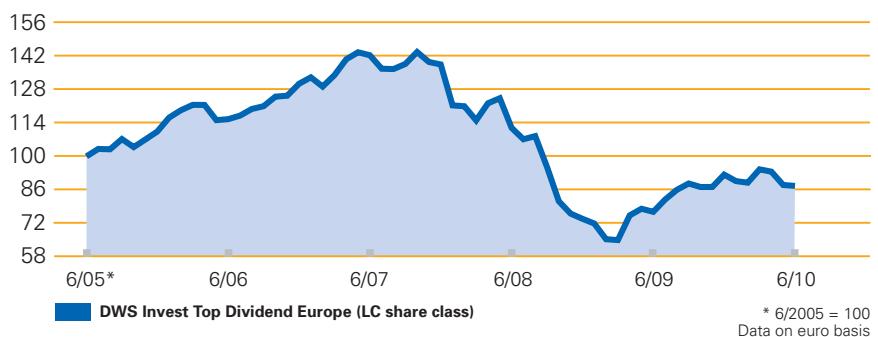

DWS Invest Top Dividend Europe

European dividend sub-fund

In the first half of 2010, the European equity markets were generally weak because of the high level of government debt. In this difficult environment, DWS Invest Top Dividend Europe recorded a decline of 5.1% per share (LC share class, in euro terms, BVI method). However, the dividends received limited losses, because of the focus on European equities offering above-average dividend yields and comparatively stable dividend performance.

With the stabilization of economic conditions, the management also invested in industrial and cyclical consumer goods stocks that were in a position to pay sustainable dividends, in addition to the traditional dividend stocks from the telecommunications, utilities and energy sectors. For example, Siemens was newly added to the portfolio, because of its attractive dividends, the company's global orientation, its exports, which were boosted by the weakness of the euro, and the company's restructuring success. The subfund invested in Nestlé with a view to the foodstuffs manufacturer's strong dividends. For the same reason, the position in British American Tobacco was increased. Positions in the telecommunications stocks France Telecom and Vodafone Group were increased because of their high dividends. Banks from southern Europe were under noticeable price pressures in light of uncertainties regarding government solvency in this region and were sold at an early stage (Banco Santander). In addition, DWS Invest Top Dividend

Europe quickly reduced the weighting of the energy sector, because the oil spill in the Gulf of Mexico had a dampening effect on prices in this segment.

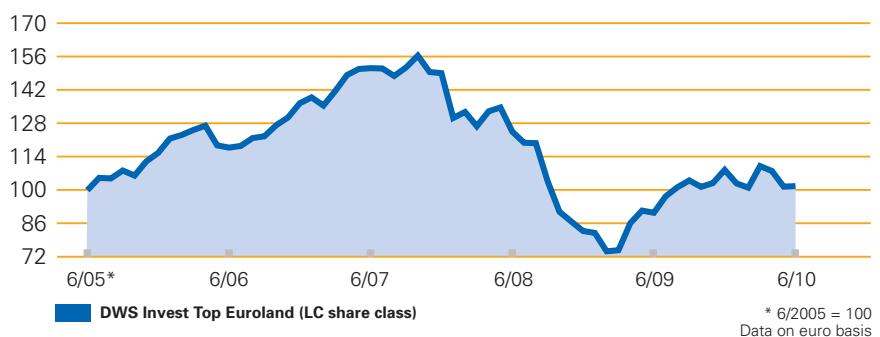

DWS Invest Top Euroland

Euro-area stocks with value-oriented management

In the first six months of 2010, the equity markets in the euro area were influenced by the high budget deficits of, in particular, southern European countries. In this difficult environment, the Dow Jones Euro STOXX 50 recorded a loss of 11.1%. The highly competitive companies in the euro area preferred by the sub-fund DWS Invest Top Euroland, recorded a decline of 6.3% per share (LC share class, BVI method, both percentages in euro terms) and thus outperformed the benchmark by 4.8 percentage points. The reason for this was the management's focus on cyclical, export-oriented companies that benefited from the global economic recovery, particularly in the emerging markets. In addition, financial stocks were significantly underweighted in view of the uncertainties surrounding the solvency of some European countries. For example, positions in Spanish banks were closed early on.

In the industrial sector, the position in Siemens was increased due to the company's global orientation, the boost its exports have gotten from the euro's weakness and its success in restructuring. In durable consumer goods, Volkswagen was added to the portfolio. The company offered a very wide range of products in comparison to other companies in the sector and was very well positioned in the high-growth Chinese automotive market. LVMH Moet Hennessy Louis Vuitton profited from the rising demand for luxury goods among the growing middle class in the emerging markets. DWS Invest Top Euroland realized some gains here

later after the company's share price rose. The information technology segment also made a comparatively solid contribution to performance. SAP holdings were increased at favorable

valuation levels because of improved international competitiveness resulting from the euro's weakness, among other reasons.

DWS Invest Total Return Bonds

(from July 1, 2010: DWS Invest Income Strategy Plus)

Fixed-rate securities, dynamically managed and with an absolute return target (no guarantee)

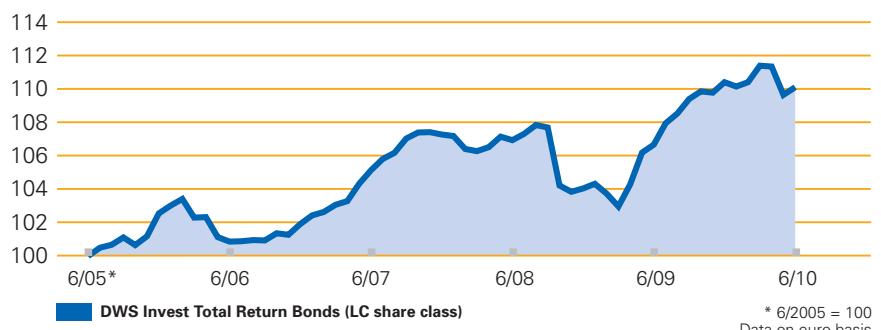

DWS Invest Total Return Bonds operated in a climate characterized by a slight recovery of the economy and increasing risks due to significantly higher levels of government debt in the industrial countries. Against this backdrop, it registered a decline of 0.3% per share (LC share class, in euro terms; BVI method) in the six months through the end of June 2010.

On the currency side, euro investments continued to form the focus. The management also invested in local currencies from the emerging markets and from the dollar sphere, which made an overall positive contribution due to the weak euro.

In addition to government bonds, the portfolio was invested in higher-yield corporate bonds. These bonds disappointed, however, due to emerging investor doubts about the sustainability of the economic recovery, which damped the investment performance. The smaller position in financials that was still being held at the beginning of the period was reduced in view of the pressures on the capital markets.

Credit quality is adequate, with higher business and financial risk. Interest and principal payments are generally made without adverse effect on credit quality. The non-investment-grade rating is consistent with the company's business model.

As of: June 30, 2010

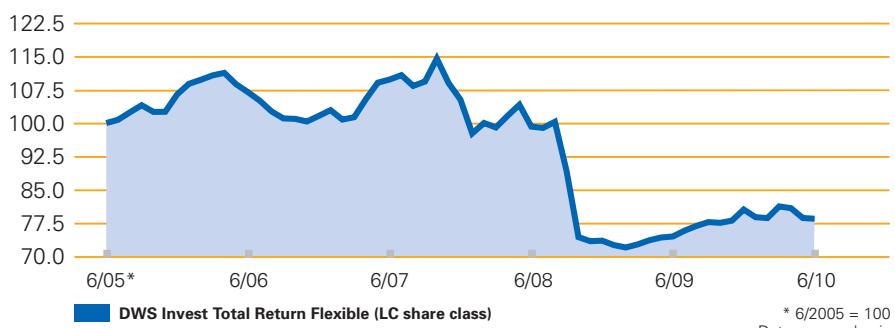

DWS Invest Total Return Flexible

A sub-fund offering the full range of traditional asset classes, flexibly managed and with an absolute return target (no guarantee)

The objective of DWS Invest Total Return Flexible is to generate an above-average absolute return in euro. According to its investment policy, the mixed fund must invest in a variety of asset classes (including international equities, bonds and derivative financial market instruments).

The investment climate was characterized by a global economic recovery, albeit of varying strengths, but also by increasing risks due to significant levels of government indebtedness in the industrial countries. Against this backdrop, the sub-fund registered a decline of 2.6% per share (LC share class, in euro; BVI method) in the six months through the end of June 2010.

DWS Invest US Value Equities

The market-diversified sub-fund for U.S. stocks

DWS Invest US Value Equities invested predominantly in equities of U.S. companies that the fund management considered to be undervalued. The sub-fund recorded an appreciation of 8.0% per share (LC share class, BVI method) during the six months through the end of June 2010. The portfolio's overall somewhat more defensive orientation in expectation of a price correction resulted in an underweight in strongly cyclical sectors like consumer goods, industrials and financials. However, these sectors turned in an above-average performance, particularly in the first quarter of 2010, and as a result the sub-fund slightly lagged behind its benchmark, the S&P 500 which gained 8.4% (both percentages in euro terms).

The weighting of the technology sector was somewhat reduced following its solid performance because of what were considered in some respects excessively high market expectations regarding the companies future earnings growth. The fund management completely closed its position and took profits in, e.g., the software producer Novell after its price rose sharply on a takeover bid. Medication manufacturer Biovail, which was contained in the portfolio, turned in a very solid performance; the company's shares rose sharply in value on the strength of a planned merger with competitor Valeant Pharmaceuticals International. The sub-fund opened a new position in Tesoro and increased its position in Valero Energy. The decision on investments in the two refinery operators was supported by their fundamentally extremely attractive valuations. Noble,

in contrast, failed to meet expectations. The share price of the oil services company was hurt by fears that demand for its services would fall be-

cause of the expected increase in costs of off-shore production as a result of the oil crisis in the Gulf of Mexico.

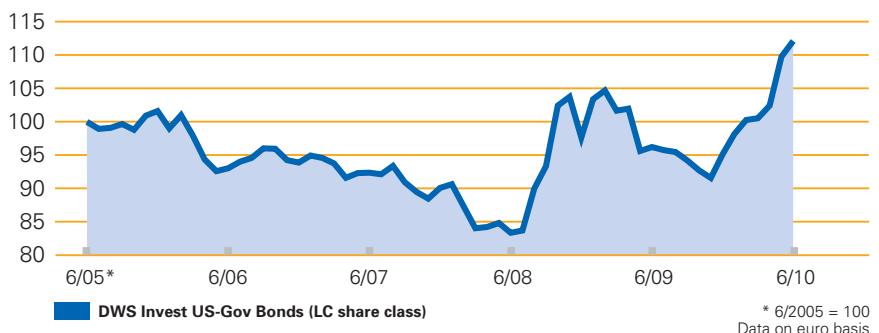

DWS Invest US-Gov Bonds

The bond sub-fund for dollar currencies

In accordance with its investment policy, DWS Invest US-Gov Bonds concentrates its investments on interest-bearing instruments issued or guaranteed by U.S. government agencies. The sub-fund operated in a climate characterized by a slight economic recovery, by increasing risks due to significant levels of government debt in the industrial countries and by severe fluctuations in the currency markets. Against this backdrop, DWS Invest US-Gov Bonds achieved an appreciation of 17.9% per share (LC share class, BVI method) in the six months through the end of June 2010, as it profited from the relative strength of the U.S. dollar against the euro. However, this performance fell short of that of its benchmark which returned a gain of 23.4% (both percentages in euro terms). This was due to the temporary partial hedging of dollar positions and the shorter orientation of its portfolio in order to limit price risks due to uncertainties in the capital markets; as a result, however, the sub-fund could not fully participate in the more favorable performance in long maturities. In terms of issuer structure, the portfolio preferred government bonds and near-government issues.

On the currency side, in addition to the U.S. dollar, the management also invested in the New Zealand dollar, Australian dollar and Canadian dollar; these currencies, however, did not appreciate against the euro as much as the greenback. This contributed to the sub-fund's performance falling short of

Securities and market rates

The sub-fund's assets are valued on the basis of the following prices/market rates

All assets Last available prices or market rates as of June 30, 2010

The management fee/all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the fund held units of other investment funds (target funds), further costs, charges and fees may have been incurred at the level of these individual target funds. No initial sales charges or redemption fees were paid during the period under review.

Transactions completed during the reporting period that no longer appear in the investment portfolio:

Purchases and sales of securities and promissory note loans (Schuldscheindarlehen); market classifications are as of the reporting date

Securities and market rates

The sub-fund's assets are valued on the basis of the following prices/market rates

Last available prices or market rates as of June 30, 2010

The management fee/all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the fund held units of other investment funds (target funds), further costs, charges and fees may have been incurred at the level of these individual target funds. No initial sales charges or redemption fees were paid during the period under review.

Footnotes

** All of this security is lent. The equivalent value totals EUR 167 328 823.70.

DWS Invest BRIC Plus

Transactions completed during the reporting period that no longer appear in the investment portfolio:

Purchases and sales of securities and promissory note loans (Schuldscheindarlehen); market classifications are as of the reporting date

The management fee/all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the fund held units of other investment funds (target funds), further costs, charges and fees may have been incurred at the level of these individual target funds. No initial sales charges or redemption fees were paid during the period under review.

Footnotes

* Floating interest rate

** All of this security is lent. The equivalent value totals EUR 4 096 516.72.

Transactions completed during the reporting period that no longer appear in the investment portfolio:

Purchases and sales of securities and promissory note loans (Schuldscheindarlehen); market classifications are as of the reporting date

Securities and market rates

The sub-fund's assets are valued on the basis of the following prices/market rates

All assets Last available prices or market rates as of June 30, 2010

The investment fund's assets are partially invested in products for which there was no liquid market as of the reporting date due to the financial market crisis. The valuation was therefore carried out with estimated current values based on indicative broker quotations or valuation models.

Footnotes

* Floating interest rate

Transactions completed during the reporting period that no longer appear in the investment portfolio:

Purchases and sales of securities and promissory note loans (Schuldscheindarlehen); market classifications are as of the reporting date

Securities and market rates

The sub-fund's assets are valued on the basis of the following prices/market rates

All assets Last available prices or market rates as of June 30, 2010

The investment fund's assets are partially invested in products for which there was no liquid market as of the reporting date due to the financial market crisis. The valuation was therefore carried out with estimated current values based on indicative broker quotations or valuation models.

The management fee/all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the fund held units of other investment funds (target funds), further costs, charges and fees may have been incurred at the level of these individual target funds. No initial sales charges or redemption fees were paid during the period under review.

Footnotes

* Floating interest rate

** All of this security is lent. The equivalent value totals EUR 519 979 295.79.

Transactions completed during the reporting period that no longer appear in the investment portfolio:

Purchases and sales of securities and promissory note loans (Schuldscheindarlehen); market classifications are as of the reporting date

Securities and market rates

The sub-fund's assets are valued on the basis of the following prices/market rates

All assets Last available prices or market rates as of June 30, 2010

The management fee/all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the fund held units of other investment funds (target funds), further costs, charges and fees may have been incurred at the level of these individual target funds. No initial sales charges or redemption fees were paid during the period under review.

Securities and market rates

The sub-fund's assets are valued on the basis of the following prices/market rates

All assets Last available prices or market rates as of June 30, 2010

The management fee/all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the fund held units of other investment funds (target funds), further costs, charges and fees may have been incurred at the level of these individual target funds. No initial sales charges or redemption fees were paid during the period under review.

Footnotes

* Floating interest rate

Transactions completed during the reporting period that no longer appear in the investment portfolio:

Purchases and sales of securities, investment fund units and promissory note loans (Schuldscheindarlehen); market classifications are as of the reporting date

Securities and market rates

The sub-fund's assets are valued on the basis of the following prices/market rates

All assets Last available prices or market rates as of June 30, 2010

The management fee/all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the fund held units of other investment funds (target funds), further costs, charges and fees may have been incurred at the level of these individual target funds. No initial sales charges or redemption fees were paid during the period under review.

Footnotes

* Floating interest rate

Transactions completed during the reporting period that no longer appear in the investment portfolio:

Purchases and sales of securities, investment fund units and promissory note loans (Schuldscheindarlehen); market classifications are as of the reporting date

Securities and market rates

The sub-fund's assets are valued on the basis of the following prices/market rates
All assets Last available prices or market rates as of June 30, 2010

The fund's assets are partially invested in products for which there was no liquid market as of the balance sheet date due to the financial market crisis. The valuation was therefore carried out with estimated current values based on indicative broker quotations or valuation models.

Securities and market rates

The sub-fund's assets are valued on the basis of the following prices/market rates

All assets Last available prices or market rates as of June 30, 2010

The management fee/all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the fund held units of other investment funds (target funds), further costs, charges and fees may have been incurred at the level of these individual target funds. No initial sales charges or redemption fees were paid during the period under review.

Footnotes

* Floating interest rate

Transactions completed during the reporting period that no longer appear in the investment portfolio:

Purchases and sales of securities and promissory note loans (Schuldscheindarlehen); market classifications are as of the reporting date

Securities and market rates

The sub-fund's assets are valued on the basis of the following prices/market rates

All assets Last available prices or market rates as of June 30, 2010

The management fee/all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the fund held units of other investment funds (target funds), further costs, charges and fees may have been incurred at the level of these individual target funds. No initial sales charges or redemption fees were paid during the period under review.

Footnotes

* Floating interest rate

** All of this security is lent. The equivalent value totals EUR 43 544 007.74.

Transactions completed during the reporting period that no longer appear in the investment portfolio:

Purchases and sales of securities, investment fund units and promissory note loans (Schuldscheindarlehen); market classifications are as of the reporting date

Securities and market rates

The sub-fund's assets are valued on the basis of the following prices/market rates

All assets Last available prices or market rates as of June 30, 2010

The management fee/all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the fund held units of other investment funds (target funds), further costs, charges and fees may have been incurred at the level of these individual target funds. No initial sales charges or redemption fees were paid during the period under review.

Transactions completed during the reporting period that no longer appear in the investment portfolio:

Purchases and sales of securities, investment fund units and promissory note loans (Schuldscheindarlehen); market classifications are as of the reporting date
