Objectives and investment policy

The objective of the investment policy is to achieve sustainable capital growth. In order to achieve this, the fund invests variably worldwide in equities, interest-bearing securities issued by governments and companies, securities funds and real estate funds. The net assets can also be fully invested in equities or bonds depending on the assessment of fund management. The fund management invests the fund's assets primarily in other funds. Up to 10% of the fund's assets may be invested in hedge funds. The selection of individual investments is at the discretion of the fund management. When investing in other funds, the fund management takes into account the earnings and risk potential of the target fund. The fund is subject to various risks. A more detailed description of risks can be found under 'Risks' in the sales prospectus. The currency of Argentos Sauren Dynamik-Portfolio is EUR. Returns and gains are not distributed but are reinvested in the fund. You may request the redemption of shares on each valuation day. The redemption may only be suspended in exceptional cases taking into account your interests as an investor.

Risk and reward profile

The calculation of the risk and reward profile is based on simulated data that cannot be used as a reliable indicator for the future risk profile. This risk indicator is subject to changes; the classification of the fund may change over time and cannot be guaranteed. Even a fund that is classified in the lowest category (category 1) does not represent a completely risk-free investment. The fund is classified in category 6 because its share price may fluctuate strongly and the likelihood of both losses and gains may therefore be high. The following are key risks for the fund and are not covered adequately by the risk and reward profile:

The fund invests a substantial portion in other funds. When investing in other funds, it must be taken into consideration that the individual target funds act independently of one another and that therefore multiple target funds may follow investment strategies which are identical or contrary to one another. This can result in a cumulative effect of existing risks, and any opportunities might be offset.
